

# AI INCOME CHALLENGE

## WORKBOOK #4

# AN IMPORTANT LETTER FROM IMAN

**“You’ve never been this early.”**

That’s still the tagline. And after today, you understand it on a completely different level.

Over the first three days, I showed you the opportunity, the proof, and the system. I showed you why AI Digital Products are the strongest AI income you can build. I showed you the 3-step system behind every product that crossed $100,000 in sales. And I showed you $97 million in tracked earnings across four events, so you know this works.

Today was different.

Today I brought in someone who has been doing this for **forty years.** Not forty years of theory. Forty years of actually building things, losing money, rebuilding from scratch, and coming out ahead every time.

**Mark Tilbury** left school at sixteen with no qualifications. His teachers had already decided he wasn’t going to amount to much. He went and got a job making wooden bins for less than two dollars an hour, being given every job nobody else wanted.

Then he borrowed **£20,000** from a bank at twenty, with every doubt in the world running through his head, built something real with it, and paid it back in under two years.

He has been early to the internet, early to mobile, early to social media. He started TikTok in 2020 when everyone at the golf club said he had lost it. Built **over 20 million followers.** And every single time, the people around him gave him the same look. The look that said "you're wrong." And every single time, he wasn't wrong. He was just early.

I didn't bring Mark here to teach you another step in the system. The system is done. I brought him here because there is a gap that no system can close on its own. The gap between knowing what to do and actually doing it.

Mark has spent forty years figuring out what lives in that gap. Today he shared it with you. Five secrets that separate the people who change their lives from the people who watch other people change theirs.

He called the first type **Lifelong Avoiders.** The people who never say no, but always say "I'll think about it." And he called the second type **Early Movers.** The people who decide before the room agrees, because they understand that by the time the room agrees, it's not early anymore.

Before you go to bed tonight, he asked you for one decision.

This workbook is where you lock it in.

**Not someday. Now.**

Iman Gadzhi

# INTRODUCTION

You've just been through Episode 4 of the AI Income Challenge.

The first three days were about the opportunity and the system. Today was about everything that gets in the way of using it.

**By the end of this workbook, you'll have locked in:**

- The difference between a **Lifelong Avoider** and an **Early Mover**, and which one you're choosing to be
- Why you never feel ready, and why that has never been the real problem
- How to read the room when nobody around you gets what you're doing
- Why the real risk never sends a bill
- Where the biggest returns actually come from when you're starting out
- Why knowing was never the hard part

**Inside These Pages, You'll:**

- Lock in Mark's 5 secrets with fill-in-the-blank questions
- Reflect on which secrets hit closest to home for you
- Identify the belief that has been keeping you stuck
- Make your commitment going into the final session

Let's lock it in.

If you haven't watched Episode 4 yet, click the button below before it comes down:

**WATCH EPISODE 4 HERE**

## SECTION 1: KEY TAKEAWAYS

Fill in the blanks using what you remember from the session. Rewatch if needed. This locks in the core learning.

*(Answers can be found at the end of the workbook.)*

**1.** Mark has been in business for forty years.

**2.** A Lifelong Avoider doesn't say no. They say "I'll think about it."

**3.** Secret 1: you never feel ready.

**4.** Limiting beliefs survive by keeping you away from the evidence.

**5.** When nobody around you gets it, it doesn't mean you're wrong. It means you're early.

**6.** The real risk never sends a bill.

**7.** The riskiest thing you can do is to not start.

**8.** The best investment you can make is in yourself.

**9.** Secret 5: knowing what to do was never the hard part. Doing it is.

**10.** The one part AI can't do for you is deciding and showing up.

# SECTION 2: THE COMMITMENT - LIFELONG AVOIDER VS EARLY MOVER

Mark opened today with something worth sitting with.

**Not everyone made it to Day 4.** Of everyone who registered, and everyone who showed up on Day 1, a lot of them are gone by now. And you're still here. That means something.

But before giving you a single secret, Mark asked for one thing. Not a "maybe." Not "I'll come back to it after the weekend." A decision. A real one.

Because here's the thing about **"I'll think about it."**

It isn't a decision. It's what you say when you want to stop thinking about something without having to say no. It costs nothing today. Which is exactly why it ends up being one of the most expensive things you'll ever say.

Think about how many things you've "thought about" in the last five years. And how many of them you actually did.

That gap is what Mark called the **Lifelong Avoider** pattern.

A **Lifelong Avoider** doesn't say no to decisions. They say "I'll think about it." And they keep saying it, for years, while opportunities move on without them. The dangerous part is that it doesn't feel like avoiding. It feels like being sensible. Like waiting until you're sure.

But waiting until you're sure is how you guarantee you're always late.

Because by the time everyone agrees, by the time the room nods, by the time it feels safe, it's not early anymore. It's just what everyone's doing.

An **Early Mover** reads the room differently. They decide before the room agrees. Not because they're reckless. Because they understand that the signal isn't consensus. The signal is when nobody else gets it yet.

That's the commitment Mark asked you to make tonight.

Not a yes to everything. Not a promise you'll get it perfect. Just the decision to take **"I'll think about it"** off the table. For good.

Because that one sentence is the only thing that has kept you exactly where you are. Every single time.

**The Sentence**

What is the most dangerous sentence in the English language, according to Mark?

"I'll think about it."

**The Two Types**

Someone who keeps avoiding decisions is called a:

Lifelong Avoider

Someone who decides before everyone agrees is called an:

Early Mover

**The Cost**

Why does "I'll think about it" feel safe?

Because it costs nothing today

**The Commitment**

What is the one thing Mark asked you to take off the table tonight?

"I'll think about it"

# SECTION 3: SECRET 1 - YOU NEVER FEEL READY

Mark started with this one on purpose.

**If you don't get this one, none of the other four make much difference.**

He left school at sixteen with no qualifications. His teachers had decided years earlier that he wasn't going to amount to much. And for a long time, he believed them. Not because it was true, but because **nobody had ever tested it.**

He got a job as a **carpenter's apprentice**, earning less than two dollars an hour. His manager gave him every job nobody else wanted. Making wooden bins. Hand-treating 10,000 metres of wood alone, in the cold, at the back of the workshop. Fitting a door for a pub landlord who complained about everything.

He thought he was being punished.

What he figured out years later was that those jobs were the **first time anyone had actually tested him for real skills.** Skills that school never measured. Whether he could build something. Whether he could design something. Whether he could talk a difficult customer round until they left happy.

It turned out he could do all three.

After three hard years of doubting himself, something shifted. He told his manager he could offer more and wanted more challenging work. The manager told him they had a five-year contract to keep making wooden bins, and that was that.

That's when he knew something had to change.

Six months later, at **twenty years old**, he was standing outside a bank about to ask for **£20,000.** Every doubt he had ever carried was running through his head at once.

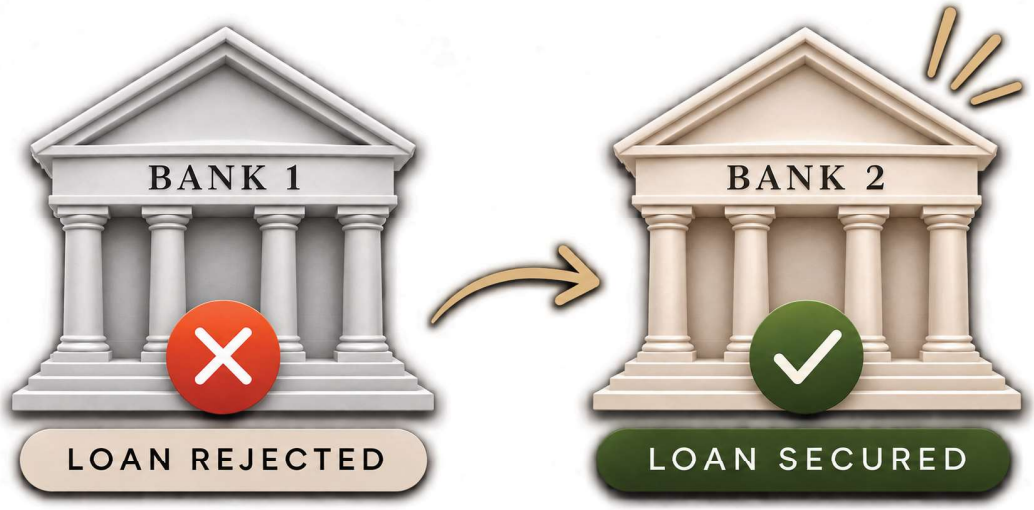

What if it fails? What if nobody buys anything? What if they say yes and I mess it up? Who am I to run a business? I left school at sixteen. I make bins.

**He walked in anyway.**

Got rejected. Walked straight out and into the next bank. No appointment. Even more doubts in his head.

And walked out with £20,000.

**Paid it back in under two years.**

The belief that he wasn't capable didn't die because someone told him he was wrong. **It died because he tested it.**

That's how it always works.

Limiting beliefs survive by keeping you away from the evidence. You say "I can't sell," so you never make the call. Because you never make the call, the belief stays safe. Every year it goes untested, it feels more true. Not because it is. Because it's never been checked.

Think about driving. Before you could, did it look possible? Clutch, mirrors, gears, other cars, all at once? Now you do it while thinking about something else entirely.

Or your first week in a job you now do with confidence. Did you feel like someone was about to tap you on the shoulder and tell you there had been a mistake?

**You've already proved, with your own life, how these beliefs work.** They feel like facts. Right up until you test them. And then they're gone.

And here's what makes this week different from any time this has been tried before.

**AI has now handled most of the actual doing.** The building. The finding of the right thing to build. Which means the belief that was always hardest to test, "I don't have what it takes to build something," has just lost most of its evidence.

The only thing left to test it with is a decision. Nobody has what it takes... until they put it to the test. And then... they actually do.

---

**The Verdict**

What did Mark's teachers decide about him early on?

That he wasn't going to amount to much

**The Job**

What was Mark's first job?

A carpenter's apprentice

How much did he earn per hour?

Less than $2 an hour

**The Bank**

How old was Mark when he walked into the bank?

20 years old

How much did he ask for?

£20,000

What happened at the first bank?

Rejected

What happened at the second bank?

Loan secured

**The Payback**

How long did it take Mark to pay back the loan?

Under two years

**The Pattern**

How do limiting beliefs survive?

They keep you away from the evidence

**The Secret**

Complete the secret:

“Nobody has what it takes... until they put it to the test.”

# SECTION 4: SECRET 2 - BEING WRONG VS BEING EARLY

Have you told anyone about attending this challenge?

And if you did, did you get the reaction you were hoping for? Or did you get **the look?**

You know the one.

Mark has been on the receiving end of that look more times than he can count. And today he explained exactly what it means.

In **2004**, he had three shops doing well. Everyone around him was doing the obvious thing. Signing leases on more physical locations. That was what growth looked like. That was the proven model.

Then he came across the internet.

His first reaction? **He gave it the look himself.**

The internet in 2004 was slow, ugly, and most people in business considered it a fad. He nearly walked away from it. And then he had what he described as **probably the most valuable thought he has ever had:**

**“What if I just don’t understand it yet?”**

Not “they’re wrong.” Just: “what if I don’t know enough to have an opinion yet?”

So he put his doubts down for a minute and ran a simple experiment. He built a basic website with information about his business. Within weeks, people were calling and emailing to buy products online.

He decided he wasn’t opening any more shops. He was moving the business to the internet.

**And that’s when he got the look. From everyone.**

The first few years were slow. It took time for people to trust buying online. So the people giving him the look weren't unreasonable. It did look uncertain at the time.

But a few years later, his internet sales made up the **majority of his business.**

Then it happened again with TikTok. Same look. Same words. Same outcome.

Here's what those two experiences taught him about that judgment.

**The judgment is always misguided.** Because people can only react to what they already know. And the whole point of being early is that they don't know yet.

When someone gives you the look, they are not telling you something about the opportunity. They are telling you something about what they know. Which, right now, is nothing.

Investors have a saying: **"Be fearful when others are greedy, and greedy when others are fearful."** Everyone has heard it. Almost nobody does it. Because when you actually invest when others are fearful, you get the look.

Mark invested heavily after the Dot-com bubble in 2000. Everyone said he was mad. He did the same again in 2008. Same reaction. Proved right both times.

**Nodding is what late looks like. The look is what early looks like from the inside.**

A Lifelong Avoider waits for the room to agree before moving. But by the time the room agrees, it's not early anymore.

An Early Mover reads the room the other way. **When nobody gets it, that's the signal.** If they don't get it, it's not because you're wrong. It's because you're early.

---

**The Thought**

What was the most valuable thought Mark has ever had?

"What if I just don't understand it yet?"

**The Experiment**

What did Mark build to test the internet?

A simple website

**The Investor Rule**

Complete the famous investing saying:

"Be fearful when others are greedy, and greedy when others are fearful."

**What the Look Means**

When someone gives you the look, what are they telling you?

Something about what they know, not something about the opportunity

**The Signal**

For an Early Mover, when nobody gets it, that is the signal

**The Secret**

Complete the secret:

"If they don't get it, it's not because you're wrong. It's because you're early."

# SECTION 5: SECRET 3 - THE REAL RISK NEVER SENDS A BILL

When you think about starting something new, you add up what it could cost. You picture the money gone. The “I told you so.”

But here’s what almost nobody does.

**They never sit down and add up what not doing it is costing them.**

Because somewhere in your head, there’s a rule. If I don’t touch it, I can’t lose it. Doing nothing is free. Staying exactly where I am is the safe option.

Mark called it **the most expensive belief he has ever held.**

At eighteen, he thought a weekly paycheck was the safest income in the world. What he didn’t consider was that at any point, one person could cut it off entirely, with nothing he could do about it.

He called that a **one-legged stool.** One income supporting your entire life. It feels stable. Right up until someone breaks the leg.

Then he told the story of his competitors from the shop days. The ones signing leases on their fourth, fifth, and sixth shops while he moved online. Nobody called that risky. Everyone called it **growth.**

And here’s what happened. **Nobody sent them a bill.**

No letter arrived saying the high street was finished. The shops just got a little quieter each month. Never enough to panic about. Until it was obvious things weren’t getting better. And by then they had multiple leases, dozens of staff, and an outdated model. They ended up asking Mark to buy their stock to help them clear their debt.

**That’s the part nobody tells you about playing it safe. The risk doesn’t go away. You just don’t know it’s there.**

There are **two kinds of risk.** Almost everyone only counts one.

The first is the **risk of doing something.** Visible. You can put a number on it.

The second is the **risk of doing nothing.** Invisible. Which is exactly what makes it dangerous.

Money sitting in a savings account at 1% while prices go up 4%. Nobody feels that loss. There's no statement saying "you lost 3% this year." But you did.

The car you never get serviced saves you money every year. Right up until the day it doesn't.

**Doing nothing has a cost. It just never sends the bill.**

Now look at what starting actually costs today compared to when Mark started in **1988.**

Back then: a **£20,000 loan** he didn't have. A **10-year lease** payable whether he succeeded or not. Thousands in stock sitting on shelves before a single customer walked in. Staff wages to cover regardless of sales.

Today: **a laptop. An internet connection. A few evenings.**

If it doesn't work, what have you actually lost?

Now sit with the other question. How much risk are you carrying right now? One income. Someone else controlling it. If it stopped for three months, what happens?

**That's the bill that never comes in the post. And it's been running the whole time.** The real risk never sends a bill. Which is why the riskiest thing you can do is not starting.

---

**The Stool**

What did Mark call a single income that someone else controls?

A one-legged stool

**The Two Risks**

What are the two kinds of risk?

The risk of doing something, and the risk of doing nothing

Which one is invisible?

The risk of doing nothing

**1988 vs Today**

Name two things Mark had to pay for when starting in 1988:

£20k loan and 10-yr lease

What does starting cost today?

A laptop and an internet connection

**The Secret**

Complete the secret:

“The real risk never sends a bill. Which is why the riskiest thing you can do is to

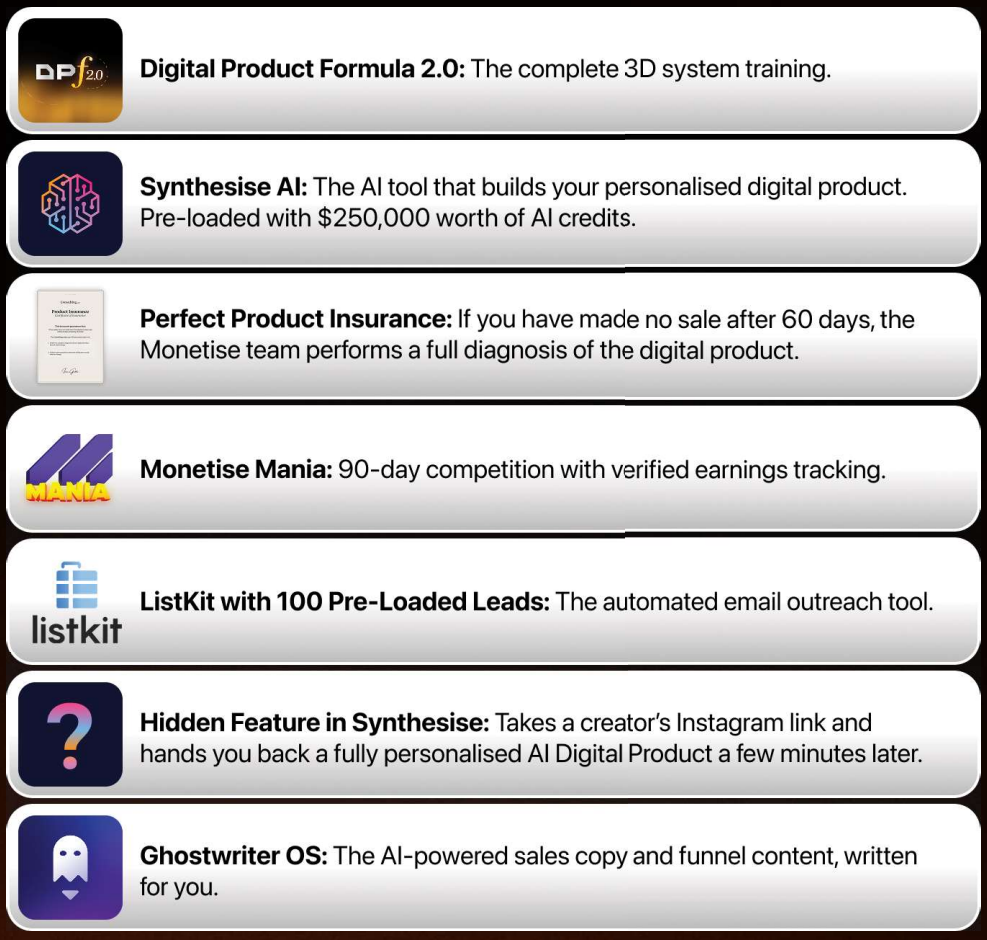

not start.”

## FOR THOSE WHO WANT MY HELP TO PUT THIS INTO ACTION

I've opened limited spots for **Monetise**, the world's first complete system for building profitable AI Digital Products without needing any expertise, technical skills, or previous experience.

You'll get the specialised AI, the education, my support, and the distribution. All in one place.

**You get:**

**ACCESS THE OFFER HERE**

# SECTION 6: SECRET 4 - THE BIGGEST RETURNS ARE ON THE SMALLEST BETS

**Charlie Munger**, Warren Buffett's partner, had a line he was famous for.

**"The first hundred thousand is a bitch. But you've got to do it."**

And he's right. If you're trying to get there the normal way.

Mark showed what the normal way looks like.

Imagine you achieve the same returns as **Warren Buffett**, one of the greatest investors of all time. Over his career, he has averaged roughly **20% a year.** Start with **$10,000** at that return, and after five years you have almost **$25,000.** That's a **149% return.** Genuinely strong by any measure.

But is that life-changing money? Would an extra $15,000 five years from now completely transform your life?

When you break it down, that's the equivalent of **$250 a month** over five years. Achieving the same returns as one of the greatest investors who has ever lived.

So here's the question you should actually be asking yourself.

**If even the greatest investor in the world can't turn a small amount into life-changing wealth in a few years, how does anyone actually get rich starting from nothing?**

The answer is an **asymmetric return.** That's where you put in a relatively small amount of money, time or effort, and the potential reward is massively disproportionate to what you put in.

And here's something Mark has learned from forty years of investing that most people never realise.

**You actually have an advantage over people like him right now.**

When you are dealing with millions, you are competing with every other wealthy investor for the same opportunities. That competition drives prices up and returns down. At his size, an opportunity has to be big enough to be worth his time.

When you have only $5,000, you have access to opportunities that wealthy investors would not even bother with. **Which means the return is still sitting there, untouched.**

A second-hand lawnmower for **$150.** Charge **$25 per lawn.** After six lawns, you've made back the cost. Every lawn after that is pure return.

A **$10** find at a car boot sale sold online for **$60.** That's a **500% return.**

Now try doing either of those at scale with $150,000. You simply couldn't.

But here's the part that matters most.

Of all those small bets, the lawnmower, the car boot finds, which one keeps paying the longest?

**None of them.**

The lawnmower pays until it breaks. The car boot sale pays once. Every one of them wears out, sells out, or gets replaced.

Except one.

**The investment you make in yourself.**

That's the only investment you pay for once and carry for the rest of your life. It doesn't break. It doesn't run out. And nobody in a boardroom can take it away from you.

After **forty years** of looking for the best returns, Mark has never found an investment that consistently beats investing in yourself.

A **Lifelong Avoider** looks at $5,000 and sees how small it is. So they protect it, put it somewhere at 3%, and wait until they have "enough" to do something real with it. By the time they have enough, the superpower is gone.

An **Early Mover** looks at that same $5,000 and sees an opportunity that might never be as valuable to them again.

Because where else can having **less** money actually give you an advantage over some of the world's greatest investors? The biggest percentage returns can come from the smallest bets. And the biggest mistake is thinking you need to get rich before you can take advantage of them.

---

**The Quote**

Complete Charlie Munger's famous line:

"The first hundred thousand is a bitch. But you've got to do it."

**The Buffett Return**

What annual return has Warren Buffett averaged?

20 %

Starting with $10,000 at that return, how much would you have after five years?

$25,000

**The Asymmetric Return**

What is an asymmetric return?

Where you put in a small amount and the reward is massively disproportionate

**The Lawnmower**

How much does the lawnmower cost?

$150

How much does each lawn earn?

$25

After how many lawns have you made back the cost?

6

**The Best Investment**

According to Mark, what is the only investment that keeps paying for life?

Investing in yourself

**The Secret**

Complete the secret:

"The biggest percentage returns can come from the smallest bets. And the biggest mistake is thinking you need to get rich before you can take advantage of them."

# SECTION 7: SECRET 5 - KNOWING WAS NEVER THE HARD PART. DOING IS.

Mark saved the best for last.

And the story that unlocks it is one he has carried for decades.

When he was starting his first proper business, he spent months planning it. What products he would sell. How he would attract customers. What he would do differently from the competition.

He was so excited about it that **he shared the whole plan with someone he trusted.**

**That person stole the idea and opened the business himself.** Before Mark had even started.

First came fury. Then something worse. Fear. Because now his idea was already out there, and someone else had the head start.

So what did he do?

He watched. And what he saw was that his friend was running the business completely wrong. Mark could see exactly what needed fixing.

So he drew up a business plan, went from bank to bank, secured the loan, and **bought the very shop his friend had stolen from under him.**

Turned it around. Grew it. Opened more locations.

And here's what that experience taught him.

**Having the same idea doesn't mean you'll get the same result.**

His friend had the plan. But Mark was the one who kept building on it. Making decisions. Doing the work. Learning from mistakes. Improving. That was the part nobody could copy.

**The execution.**

If someone can take your greatest business idea and copy it almost overnight, how much was that idea really worth in the first place?

The real value was never in knowing what to do. **It was in actually doing it.**

Now think about this honestly.

How many videos have you watched about making money online, building an AI income, using AI? More than five? Almost certainly. More than ten? Maybe even more.

**How many things have you started because of them?**

That's the gap. And it's not laziness. It's a false dilemma you've created for yourself.

**"Once I know enough, I'll start."** One more video. One more bit of research. It sounds responsible. Right up until a man with your entire plan in his hands proved it wrong.

Because if knowing everything wasn't enough for him, what is one more video going to do for you?

Learning feels safe. You can watch a hundred videos about starting a business and never risk a single thing. You can't fail at something you haven't tried. But the moment you actually start, there's a chance you could get something wrong. And that's what keeps people stuck.

**Real research has a purpose, and eventually it has an end.** If you can't explain what you're still trying to find out before you start, you're probably not researching anymore.

And here's what's changed everything.

For the first time, **the hardest part of starting, the actual doing, can be done for you.** The building, done by AI. The finding of the right people to buy it, done by AI. The delivering, at any hour, to anyone, anywhere, done by AI.

The forty years Mark spent learning execution? **You get to skip.**

Which leaves only the one part AI can't do.

**Deciding. And showing up.**

---

**The Story**

What did Mark's friend steal?

His business plan

What did Mark do about it?

He bought the business back

**The Lesson**

Having the same idea doesn't mean you'll get the same result

What was the part his friend could never copy?

The execution

**The Gap**

What is the false dilemma people tell themselves?

"Once I know enough, I'll start."

**What AI Handles**

Name two parts of the doing that AI now handles for you:

building and delivering

**What's Left**

What is the one part AI can't do?

deciding and showing up

**The Secret**

Complete the secret:

“Knowing what to do was never the hard part. Doing _____ it is. And it’s the only part nobody can copy.”

**THE DECISION**

Mark spent today giving you five secrets that took him forty years to learn.

And every single one of them pointed to the same thing.

The gap was never information. You've had enough of that. The gap is the decision you keep putting off. The "I'll think about it" that feels safe today and costs you everything over time.

You know what the real risk is now. It's not starting. It's staying exactly where you are, with one income you don't control, while the opportunity moves on without you.

You know that the biggest returns available to you right now aren't in a savings account or a stock portfolio. They're in the one investment that pays you for life.

And you know that the doing - the part that always stopped people before - has never been more within reach.

So here's the fact. You don't need the money itself. What you need is what the money buys: **a machine that pays you, consistently, on demand.**

The only variable left is the one Mark asked you about tonight.

Are you a **Lifelong Avoider?** Or are you an **Early Mover?**

One of them is reading this and saying "I'll think about it."

The other one is taking the next step toward their **Turning Point.**

▼ CHECK THE NEXT PAGE FOR DETAILS ▼

**You Get:**

- **Digital Product Formula 2.0:** The complete 3D system training.
- **Synthesise AI:** The AI tool that builds your personalised digital product. Pre-loaded with $250,000 worth of AI credits.
- **Perfect Product Insurance:** If you have made no sale after 60 days, the Monetise team performs a full diagnosis of the digital product.
- **Monetise Mania:** 90-day competition with verified earnings tracking.
- **ListKit with 100 Pre-Loaded Leads:** The automated email outreach tool.
- **Hidden Feature in Synthesise:** Takes a creator's Instagram link and hands you back a fully personalised AI Digital Product a few minutes later.
- **Ghostwriter OS:** The AI-powered sales copy and funnel content, written for you.

**ACCESS THE OFFER HERE**

# SECTION 8: LIGHT BULB MOMENTS

Use this space to capture what landed most strongly during Episode 4.

**1. Which of the five secrets hit closest to home for you, and why?**

Secret 5: knowing was never the hard part, doing is. "Real research has a purpose and an end", so phase 1 of our project needs a clear end date.

**2. What is the belief about yourself that has kept you in "I'll think about it" the longest? Write it down exactly as it sounds in your head.**

"I need to understand everything before I start." Research feels like progress, but if I can't say what I'm still trying to find out, it's time to build.

**3. Add up the invisible cost. Think of one decision you have been sitting on. What has doing nothing actually cost you in that time?**

Every week of only researching is a week without a product, sales data or feedback.

The real cost is lost learning, not lost money.

**4. Mark asked you to commit to one thing tonight. Write down your decision.**

Finish phase 1 research by a fixed date, then choose the tools (phase 2) and build our own system (phase 3). Not buying Monetise.

## SECTION 9: NOTES

Use this space for any additional thoughts, ideas or questions for the final session.

Workbook 4 is almost all mindset; no new method for building or selling products.

GhostwriterOS = AI sales copy and funnel content (new bonus). Claude covers this for us.

Iman's company owns a large stake in ListKit, so its recommendation isn't neutral.

For the finale: how does a creator launch actually run (timeline, content, conversion)?

Repo: github.com/wbatorek/ai-income-project

# COMMITMENT SECTION

**Your Commitment Going Into Day 5**

Four days in. One session left.

Mark asked you for one decision tonight. I asked you for one on Day 1.

**They're the same decision, said two different ways.**

Stop waiting to feel ready. Stop waiting for the room to agree. Stop saying "I'll think about it."

**I commit to:**

Going into the final session as an **Early Mover**, not a **Lifelong Avoider.** Which means:

My decision, made tonight:

Finish phase 1 (research and requirements) by a fixed end date, then choose

tools and build our own AI product system. No more open-ended research.

**Why this matters to me:**

A stable income that doesn't depend on my hours,

so I can work less and have more time for friends, family and travel.

**Signed:** _____

**Date:** _____

# ANSWER SHEET - SECTION 1
