

AI INCOME CHALLENGE

WORKBOOK #2

AN IMPORTANT LETTER FROM IMAN

Yesterday was about the opportunity. Today, we build.

If you were here for Episode 1, you now understand why the move everyone calls brave, quitting your occupation and going all in, is actually the riskiest thing you could do right now.

You've seen why the smart thing to do was never to quit. It was to **add a second income without touching the first**, by getting AI to work for you.

You know why almost every side hustle you've ever been offered isn't a side hustle at all. It's a second job. And a second job can never become the thing that lets you stop working.

You understand that every hour you put into one buys you exactly one hour of money and zero hours of freedom.

So you found out there's only one way out. Stop trading your time for money and start owning assets, something that **pays you whether you show up or not.**

Until about 18 months ago, there were only two ways to get one. Buy it with capital you don't have, or build it with a skill that takes ten years to learn.

And then you discovered the first asset in history that breaks both of those limitations. One you can build without capital and without any hard-to-learn skills: **AI Digital Products.** It works like digital real estate. You build it once and get paid over and over.

You saw that you don't need prior experience, authority, or even to show your face online. You can start this from your kitchen table, in any country, without having to change anything about your current life.

And you discovered the **3D system: Develop, Distribute, Deliver.** The three steps behind every AI Digital Product that makes real money.

Which means you're now ready to go from **learning mode into earning mode.** And what's stopping you from making that leap comes down to one thing: a structured action plan to develop your first AI Digital Product.

That's exactly what this session delivers. It's the same action plan I give my clients inside my flagship programme, Monetise, the one behind **over $155 million in digital product sales.**

This workbook covers Episode 2.

Keep it open as you watch. Fill it in properly.

Why The Product Is Everything

I want to be clear with you about why we're giving an entire session to this one step.

Because **the product is the piece everything else hangs on.** Get this right, and everything after it is simple. Get it wrong, and nothing after it matters.

You could put a product in front of 50,000 people who are ready to spend money. But if it's the wrong product, you'd make nothing.

Now, the same 50,000 people, same effort, but with the right product, and you could wake up to more money than you make in months of work.

The only thing that changed was your product. So that's what we're covering in this session.

What AI Actually Changes

I know some of you might be thinking: “Sure, Iman. But is AI actually good enough to create something people would pay real money for?”

For most people, their entire experience with AI is asking ChatGPT to write an email or a birthday message. But you already trust AI with dozens of things every single day, without even thinking about it. Your phone finishes your sentences before you type them. You get fraud alerts on your phone, triggered by AI. Most cars now brake before you do in emergencies. In aeroplanes, autopilot flies most of the flight, and you sleep through it at 35,000 feet.

You already trust it with your time, your money, and even your life. So why not also use it for something that actually makes you money?

Last year, AI passed the Turing test for the first time in history, a test created back in 1950 to determine whether a machine could think like a human. Which means it is now officially impossible to tell the difference between **the right AI** and a human expert. It took 75 years to get here. **You’ve never been this early.**

We have research showing the right AI outperforms PhD experts in their own fields. We even have the CEO of Google saying AI is a more profound discovery than fire and electricity. But notice what I keep saying: **the right AI.** Not just any AI.

What that means for you is that **your own knowledge and skills are no longer the ceiling** on what you can create and how much you can earn. You can make as much as a doctor, without having to go through the decades of studies that it takes to become a doctor. You can make lawyer-money, without having to become a lawyer or get a degree. The size of what you can build has nothing to do with the life you’ve lived so far anymore.

You're not capped by your background, your education, or the career path you happened to end up on.

What You Should Be Paying Attention To

In this session, you'll discover:

- How to **identify topics** people are already paying for
- How **AI develops your entire digital product** for you
- How to **package it into something you own**, all in three clicks

Because everything in this session is based on real data, from **tens of thousands of clients inside Monetise** earning money from AI Digital Products right now. Which means I can see exactly who's succeeding, how much they're making, and what they're doing differently.

On The Doubt You May Be Carrying

I know some of you came away from Episode 1 thinking: "all this sounds a bit too good to be true."

And honestly? That's the right reaction. That's the reaction of a smart person who's been promised things before that didn't deliver.

So all I'm asking is that you set that doubt to the side for one hour and let what I'm about to show you speak for itself. Pick it back up at the end if you still need it.

Because here's what I know after everything I've seen: **you're only one digital product away from waking up to more money than you make in months.**

So use this workbook properly. Fill it in. And make sure you stay through to the very end.

INTRODUCTION

This is Day 2 of the AI Income Challenge. Day 1 showed you the opportunity. This session hands you the action plan.

You're going to see the exact system behind **$155 million in digital product sales** from Monetise clients. You'll watch a complete digital product get built from scratch, on this screen, before the session is done.

This method allows you to create a digital product without being an expert at anything, without having to learn a skill that takes years, without spending a dollar to start, and without ever showing your face, if you don't want to.

Inside these pages, you'll:

- Learn the **3 Secrets** to developing a profitable AI Digital Product
- Discover why **Profitable Pockets** beat passion every time
- See a complete digital product get built in **three clicks**
- Understand why **specialised AI** changes everything
- See why this is a model with **unlimited attempts** where the only way to fail is to stop
- Break down the **real proof** from over $155 million in tracked results
- Get clear on what **Monetise** is and how the tools do the heavy lifting
- Make a clear **decision and commit to your next step**

This is the System, the Proof, and the Decision. Let's begin.

If you haven't watched Episode 2 yet, click the button below before it comes down:

WATCH EPISODE 2 HERE

SECTION 1: KEY TAKEAWAYS

Fill in the blanks using what you remember from the training. Rewatch if needed. This locks in the core learning.

(Answers can be found at the end of the workbook.)

1. The 3 Secrets to developing a profitable AI Digital Product are: Identify, Synthesise, and Package.
2. Hidden topics with lots of demand and very little competition are called "Profitable Pockets".
3. Most people fail with digital products because they pick a topic based on their passion instead of what the market is already paying for.
4. Tools like ChatGPT are called Generic AI, while tools built for specific tasks are called Specialised AI.
5. The specialised AI reads over 150 real-world sources and pulls them into the solution for your digital product.
6. Your Minimum Viable Digital Product is packaged as a simple 45-page PDF.
7. It's like having an unlimited slot machine where every pull costs you nothing.
8. The progression is: Product 1 makes $15/day, Product 2 makes $50/day, Product 3 makes $100/day. Combined, that's $5,000 per month.
9. 87% of clients in the last cohort of Monetise were working or studying full-time when they started.
10. Your "Turning Point" is the day your side income surpasses your main income and work becomes a choice.

SECTION 2: THE 3 SECRETS

Before I walk you through the system, I need to cover the one mistake I see people making over and over again, the one that will completely destroy your chances of success with AI Digital Products.

The 3 Secrets to developing a profitable AI Digital Product are:

- **Secret 1: Identifying** the right topic to develop your product on
- **Secret 2: Synthesising** all the knowledge that already exists on that topic online
- **Secret 3: Packaging** it into a finished product you own

The Mistake That Kills Products Before They Start

Most people fail in this industry because they fail to identify the right topic for their digital products. The moment they decide to create one, they ask themselves, "What should I make this about?" And naturally, they go to what they know. Their hobby. Their interest. Their **passion.**

It feels like the logical place to start. It isn't.

The market doesn't care about your passion. Not even a little. It only cares whether your product solves a problem people are already looking for an answer to, and can't find a good enough solution to yet.

Most people build products nobody asked for. They spend weeks creating them. They genuinely care about the topic. The product is genuinely good. And then they don't make a single dollar from it, and they're left wondering why. So they decide digital products don't work, and that this whole industry isn't for them. When the reality is, they just picked a topic with no buyers in it.

That's the difference between a product built on passion and a product built on demand. **One starts with you. The other starts with the buyer.**

Important things to keep in mind:

- AI doesn't have preferences, passions, or attachments to any particular topic.

- It looks at what people are already searching for, already paying for, and not finding a good enough solution to. Then it **identifies the exact gaps.**
- This is why you should never make that decision yourself. **You let the AI make it for you.**

Secret 1: Identifying the Right Topic

The step-by-step process I walk you through in the live session:

- The AI scans Google, Amazon, and online communities, and finds hidden topics with lots of demand and very little competition. These are called **Profitable Pockets.**
- A Profitable Pocket is never a broad topic. It's always **a specific person with a specific problem.** Instead of "weight loss," you get into postpartum weight loss for new mothers. Instead of "language learning," you get into business English for non-native executives. Instead of "productivity," you get into quick decision-making frameworks for first-time entrepreneurs.
- The AI hands you **20 Profitable Pockets**, scored from highest profit potential down. All you have to do is pick one.
- Don't know which one to pick? Just go with the highest-profit-potential one.

Jonathan decided to create a digital product about speed reading and advanced memorisation techniques. **240,000 people** purchased it. On the low end, he earned **over $4.8 million** from a single digital product. One of the best-selling digital products of all time.

After watching the live session, complete this:

What makes a Profitable Pocket different from a broad topic?

A specific person with a specific problem (e.g. postpartum weight loss for new mothers), not a broad category like "weight loss" with heavy competition.

Give one example of a Profitable Pocket from the training:

Business English for non-native executives.

Secret 2: Synthesising the Knowledge

You've got your topic. Now somebody has to create the solution. Here's the thing. **You don't create it. It already exists.** It's just scattered across scientific studies, research papers, business reports, courses, articles, and videos.

You're never inventing anything. **You're assembling what already works.**

The specialised AI reads **over 150 real-world sources** and pulls them into one step-by-step solution. You never have to say "I'm an expert." Your product says: "Here's what the experts on this topic agree on, after analysing over 150 scientific studies." You can point to every single source.

It means you never have to be the face of the product or show your face online.

ChatGPT, Claude, and Gemini are all **Generic AI.** Genuinely useful tools that can do a little bit of everything. But they simply can't handle 150 documents at the same time, and when you're a generalist, you struggle with specialisation. **Specialised AI** is different. It's like the difference between a family doctor and a brain surgeon. Generic AI has no idea what makes a digital product actually make money. It was never trained on that.

Before I launched Synthesise AI, I wanted to test whether it could actually create profitable digital products. So I used it to create **Millionaire Mindset** in just over **1.5 hours**. Over **14,000 people** bought it. It made **over $370,000**.

After watching the live session, complete this:

What is the difference between specialised AI and generic AI?

Course claim: generic AI does a bit of everything; specialised AI does one job and handles 150+ sources. My view: a well-prompted Claude with research tools can do the same.

Why don't you need to be an expert on the topic your digital product is about?

The product synthesises what experts agree on from 150+ cited sources, so the authority comes from the sources, not from me.

Secret 3: Packaging the Product

At this point, you've got your topic and the solution. Now it has to become something an actual person can buy.

This is where most people bail out. Because they picture reading a lot, writing even more, maybe even recording videos and building a website. None of that happens here.

Nobody pays for volume. They pay for a problem going away.

That's why the digital product gets packaged as a simple **45-page PDF** that solves the exact problem your Profitable Pocket is built around. This is your **Minimum Viable Digital Product.** Something you can get out there fast, with a minimal amount of work, just to test if it works. No writing. No editing. No website to build. It takes around **40 minutes** to develop with specialised AI.

45 pages that solve a problem someone is already up at night searching for an answer to is **worth far more than twelve hours of video they'll never open.**

After watching the live demo, complete this:

After watching the demo, do you believe you could click a few buttons and create a profitable digital product yourself?

Yes, and I'll build my own system with Claude instead of buying theirs.

The steps shown in the demo can be replicated.

Why is a 45-page PDF that solves one specific problem worth more than a 12-hour video course?

Buyers pay for a problem going away, not for volume. A short, specific PDF is read and applied quickly; long video courses are rarely finished.

SECTION 3: THE INFINITE GAME

The real beauty of this model is that you can run through this process as many times as you want. You're not stuck with the first product you create. You don't like it? You create another one. It's not making money? You create another one.

Here's what's probably going to happen. Your first AI Digital Product is going to make $0. Your second one is going to make $0. And so is your third one.

Eventually, you'll create one that makes **$15 a day.** It might be your fifth product, it might be your tenth. But then, you'll keep creating them. And one will make **$50 a day.** And then eventually, one makes **$100 a day.** And now things start to get serious. With those three products, at this pace, you're making **$5,000/month** from AI Digital Products.

The progression looks like this. Fill in the blanks:

Product 1: $15 /day

Product 2: $50 /day

Product 3: $100 /day

Combined monthly: $5,000 /month

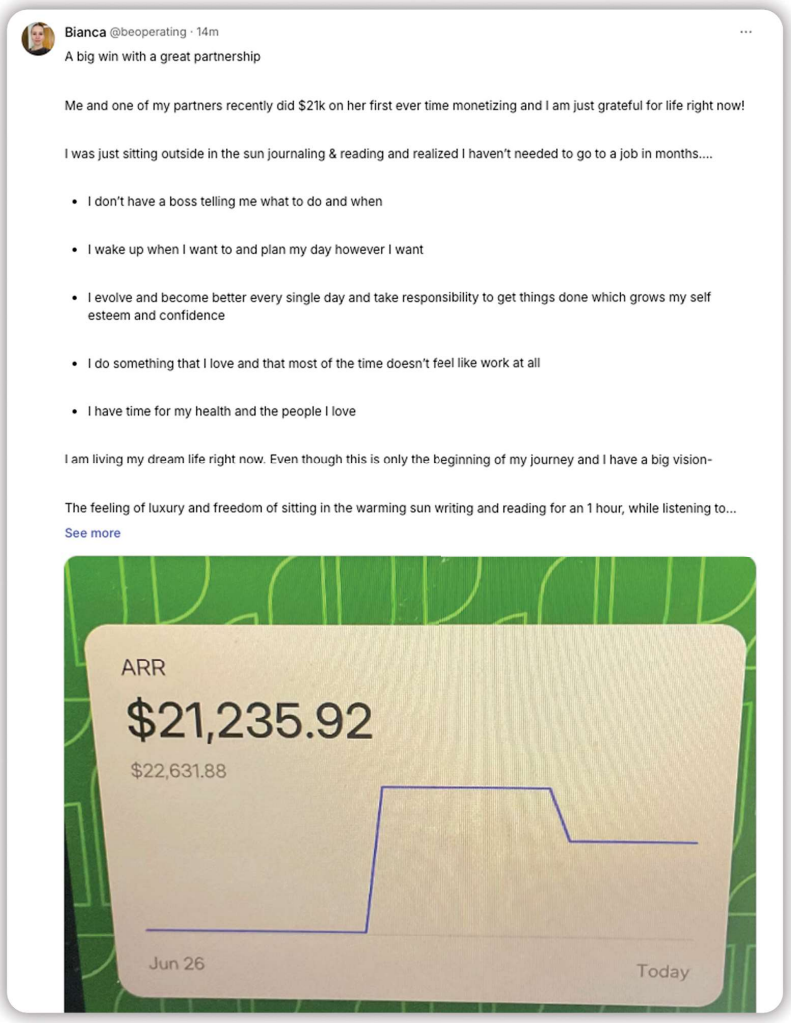

*It's like having an unlimited **slot machine**, where every pull **costs you nothing.***

90% of side hustles fail. But the reason they fail is that they **run out of attempts.** Dropshipping? You need to pay for ads to test products. Amazon FBA? You need inventory upfront. Affiliate marketing? You need ad spend to find what converts. After one or two failures, you're broke. You're out of attempts.

With AI Digital Products, there's no inventory to buy. No cost of goods. No marketing budget needed. No ongoing cost while you figure out what to do next. You just build as many as you want, at the same near-zero cost as the first. While everyone else runs out of money after attempt number two, you're just getting started.

And while you have **unlimited attempts**, you only need to get this right **once.**

Bianca, 22, from Sweden, launched her first product. After all the work, all the excitement, all the nerves, it made her **$12**. In almost any other model, that's the failure that eats your savings and takes you out of the game. But her pull had cost her nothing, so she pulled again. Her second launch did **$21,000**. Twelve dollars to twenty-one thousand, one pull apart.

The question is not “what if my first product doesn’t work?” The only question that actually matters is: **“Are you in a position where you can keep pulling the lever until one hits?”**

Because in this model, where every pull costs you nothing, **the only way to truly fail is to stop pulling.**

Your Escape Plan

87% of clients in the last cohort of Monetise were working or studying full-time when they started.

This isn’t about reckless leaps. It’s about **calculated moves.** You build your digital product side hustle nights and weekends until it’s generating enough to replace your income. Then, and only then, you think about making a transition, if you want to. **From a position of strength, not desperation.**

You keep pulling until you hit your number. And once you hit it, that’s your **Turning Point.** The day your side income surpasses your main income. The day work becomes a choice.

James watched one of our events in January, took action, and went on to hit his Turning Point. All of it happened between January and August.

Ask yourself, “What would an extra $5,000 per month change in my life right now?” Write it down:

It would cover my living costs without depending on client hours,

so I could work less and travel more.

So when you look at your week and all the activities that don’t move you closer to financial freedom, do you think you could find just **3 to 5 hours a week** to re-allocate into building something that could completely transform your life?

Yes. I can put 3-5 hours a week, and more, into building the system.

SECTION 4: THE PROOF

Why the Leaderboard Matters:

We've connected a real-time leaderboard directly to everyone's Whop accounts. Every dollar you make automatically updates your position. We see every dollar, because it all runs through our own platform.

By doing this, I'm putting my name on the line. These earnings are **public.** If my clients only made $20,000, I'd be a laughing stock, and it would be proof that what I teach doesn't work in practice.

The **only reason** I can run a public competition like this is because **this system works.** Our clients make real money with it, and I can afford to show every dollar, live.

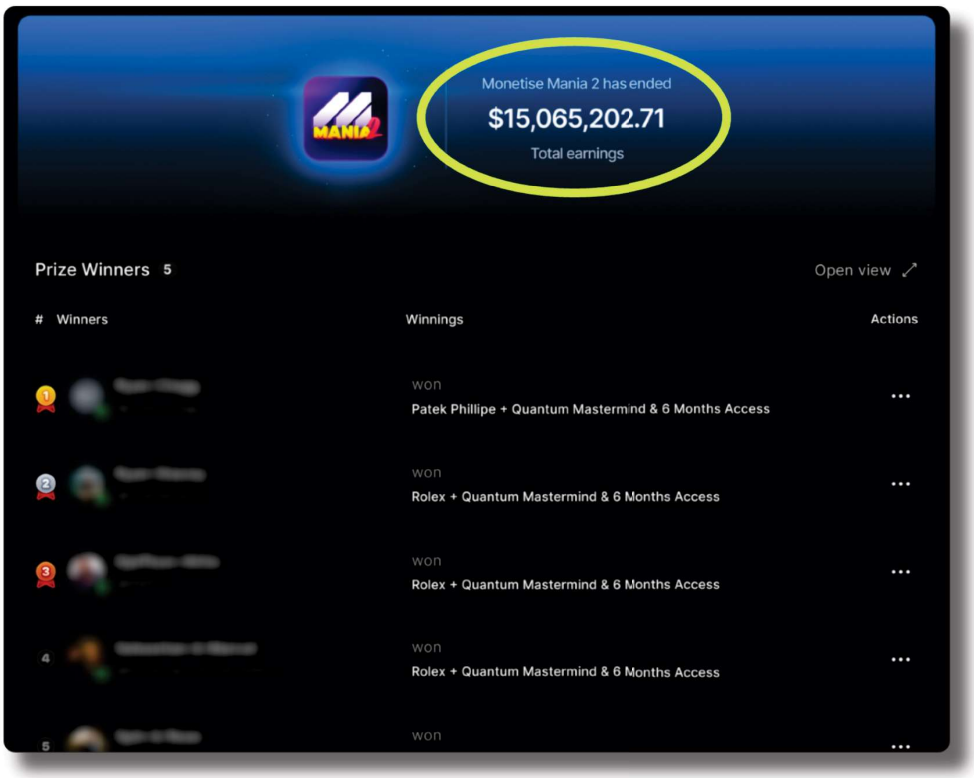

That's why I'm confident enough to display my clients' earnings on a **public leaderboard** for everyone to see. And if you'd rather keep your earnings private, you can hide your name. Tell me: is there anyone else in this industry willing to do this?

The numbers don't lie:

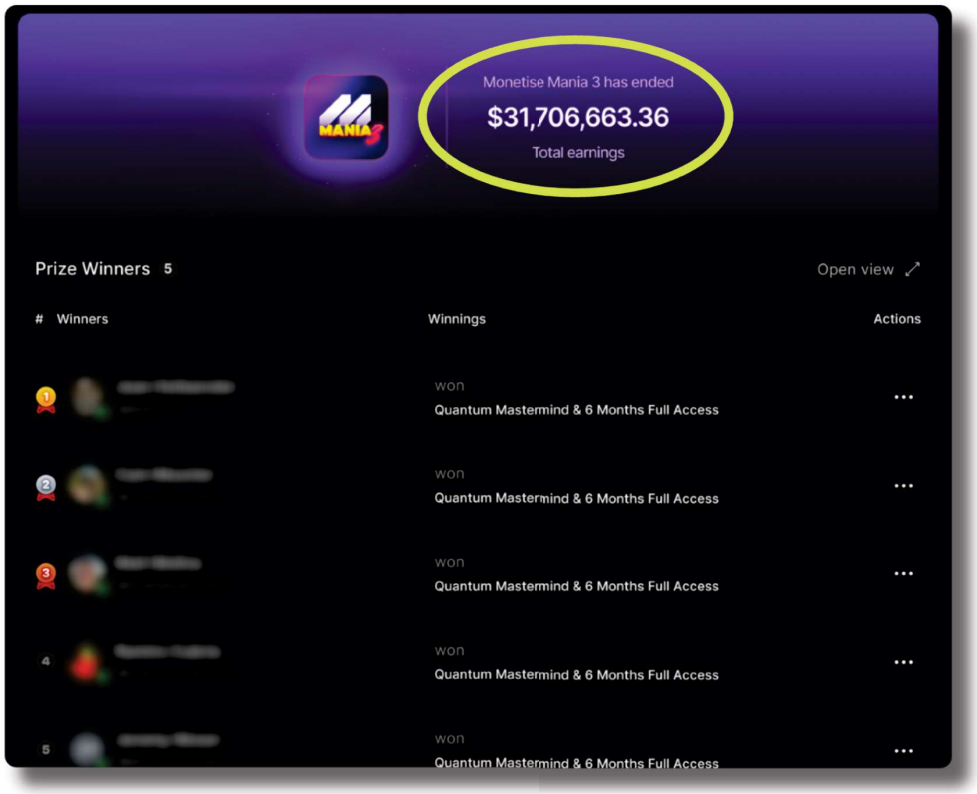

- The first time this opportunity was opened, participants earned **$8.9M in 90 days.**

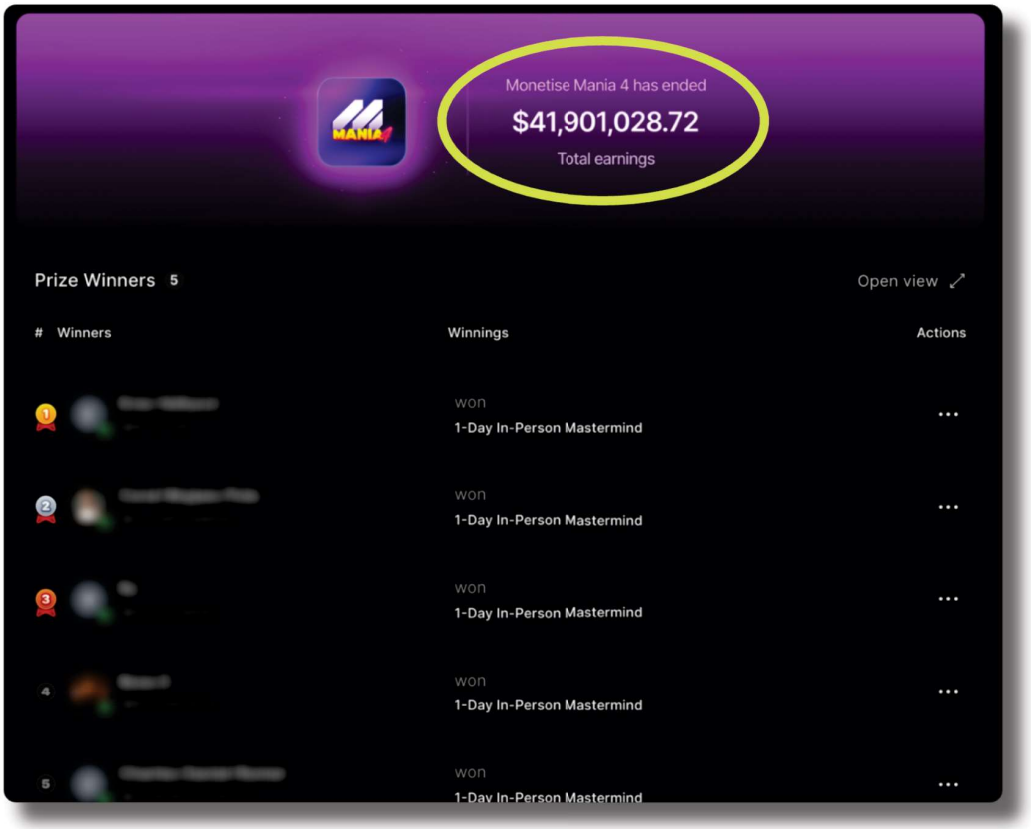

- The second time, **$15M in 90 days.**

- The third time, an astonishing **$31M in 90 days.**

- The fourth time, **$41M.**

- To date, Monetise clients have collectively earned **over $155 million** from their digital products.

- The average person on Monetise has made **$7,584** from their digital products. That's not the average between only the clients who made money. This includes everyone who didn't make a single dollar, which pushes this average down significantly.

Section 4 Questions:

Why would I put my name on the line with a public leaderboard?

Public, tracked numbers are proof, and they also sell the offer (as Whop co-owner, more sales also means more fees for him).

What would happen if the system didn't work and a public competition was run?

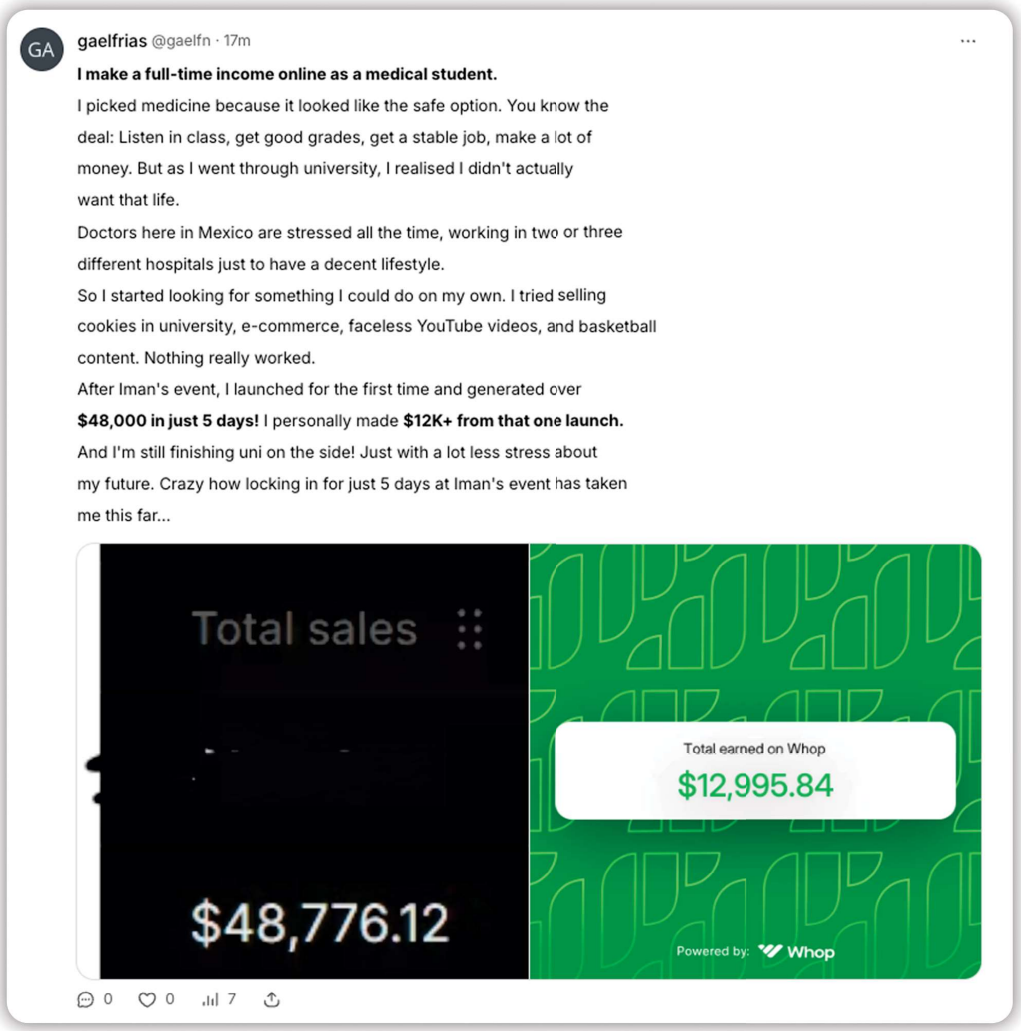

Low numbers would be visible to everyone and discredit the method. The average ($7,584 per client, incl. $0) is a more honest benchmark than the top earners.

Who Succeeded:

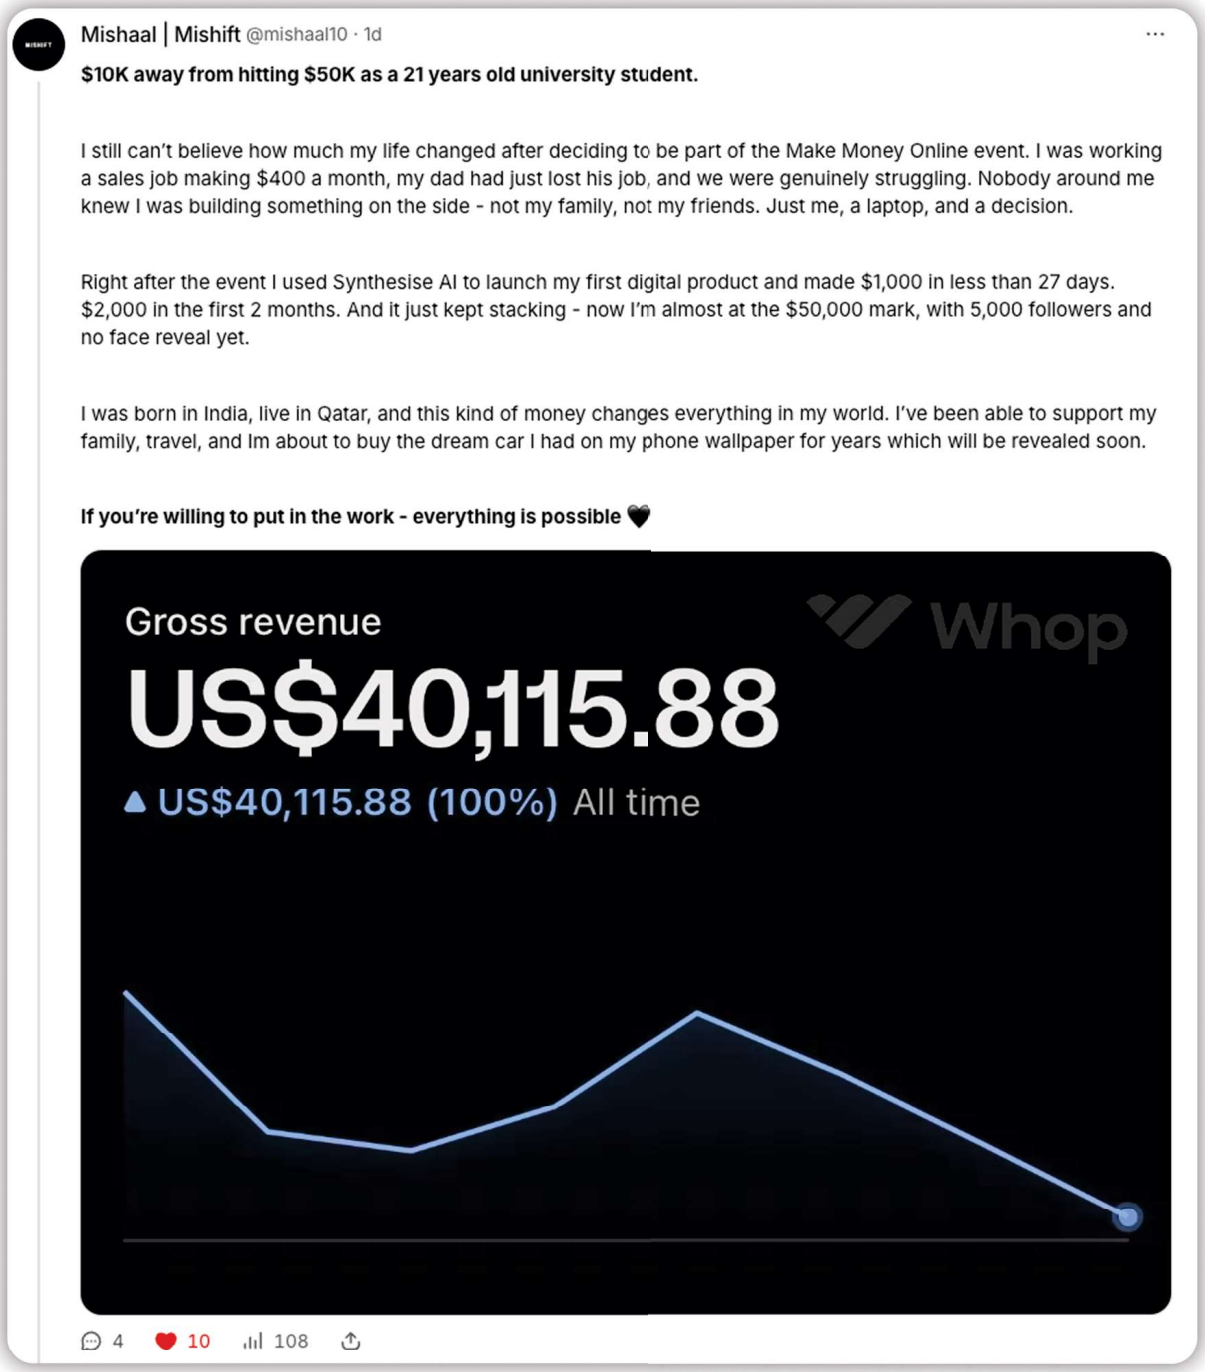

This worked for people from every background imaginable. College students to blue-collar workers, to business owners, to retired individuals. Eighteen to sixty-five. All building a profitable side hustle and achieving their Turning Point.

- A 21-year-old from India who made **$40,000** without ever showing his face online.
- A guy from Haiti with no previous experience who made **$85,000**.
- An accountant from Bosnia who generated **$210,000** while taking care of her 2 kids full-time.
- A 19-year-old who used to work construction and made enough to **buy his dream car and retire his parents.**
- A 60-year-old who **earned millions** from a digital product about woodworking.

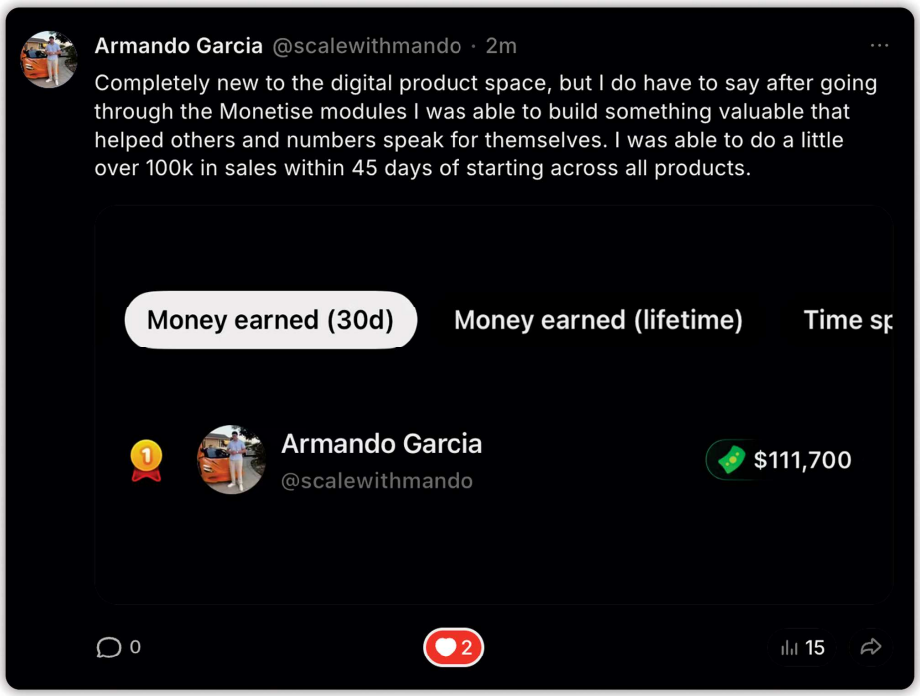

Gael is a med student from Mexico. He figured out the topic for his AI Digital Product was paediatric emergencies and made **over $12,995 in profit** from that one product. He now makes a full-time income online, as a student.

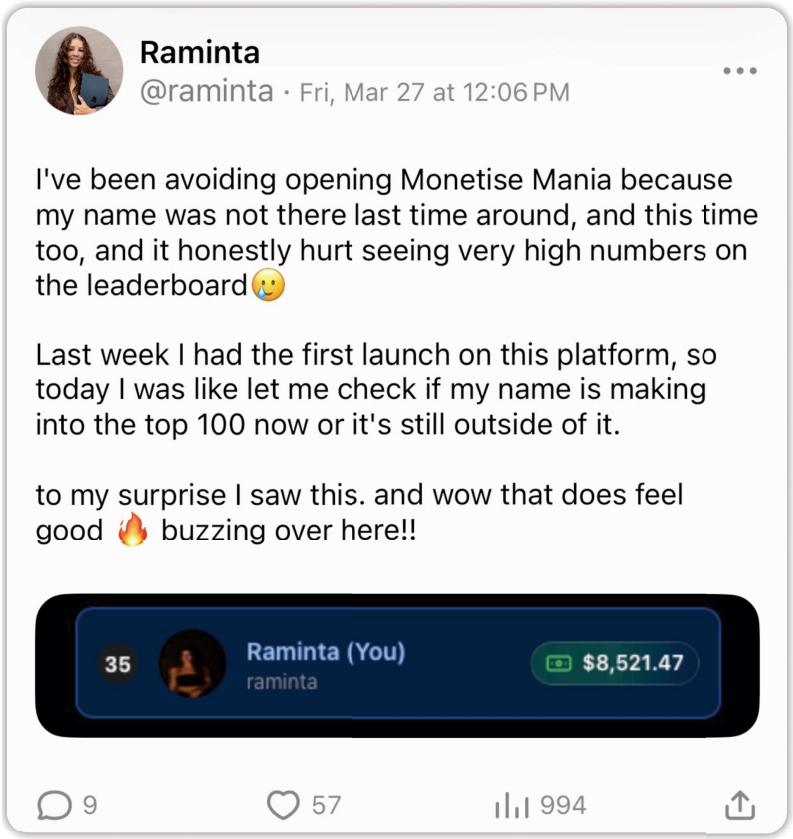

Mishaal, 21, is in Qatar, originally from India. He went from a **$300-a-month** sales job to **$9,500 a month** with AI Digital Products.

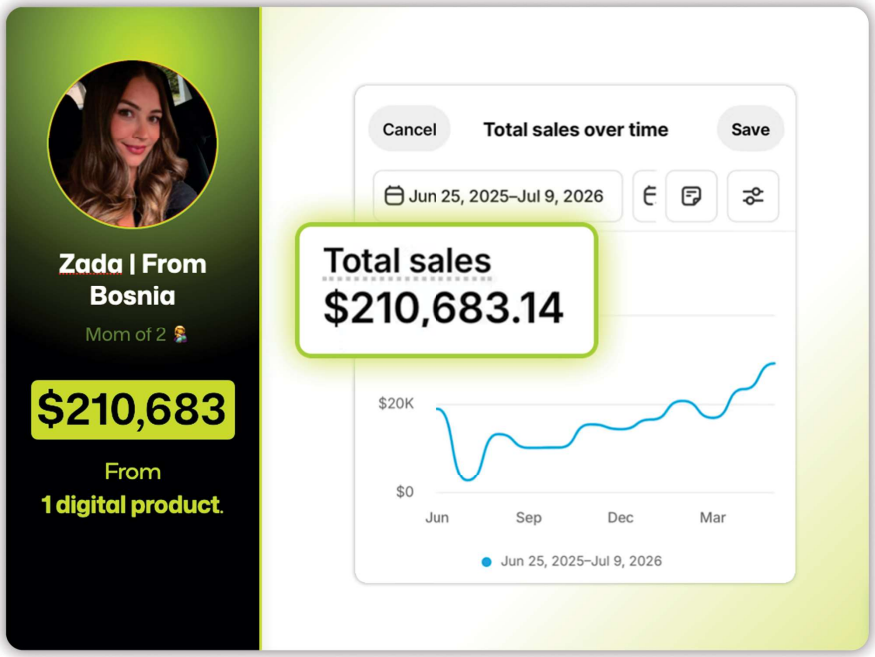

Armando was 19 years old. Completely new to digital products. He earned **over $111,000 in his first 45 days.** Even complete beginners can succeed with this system.

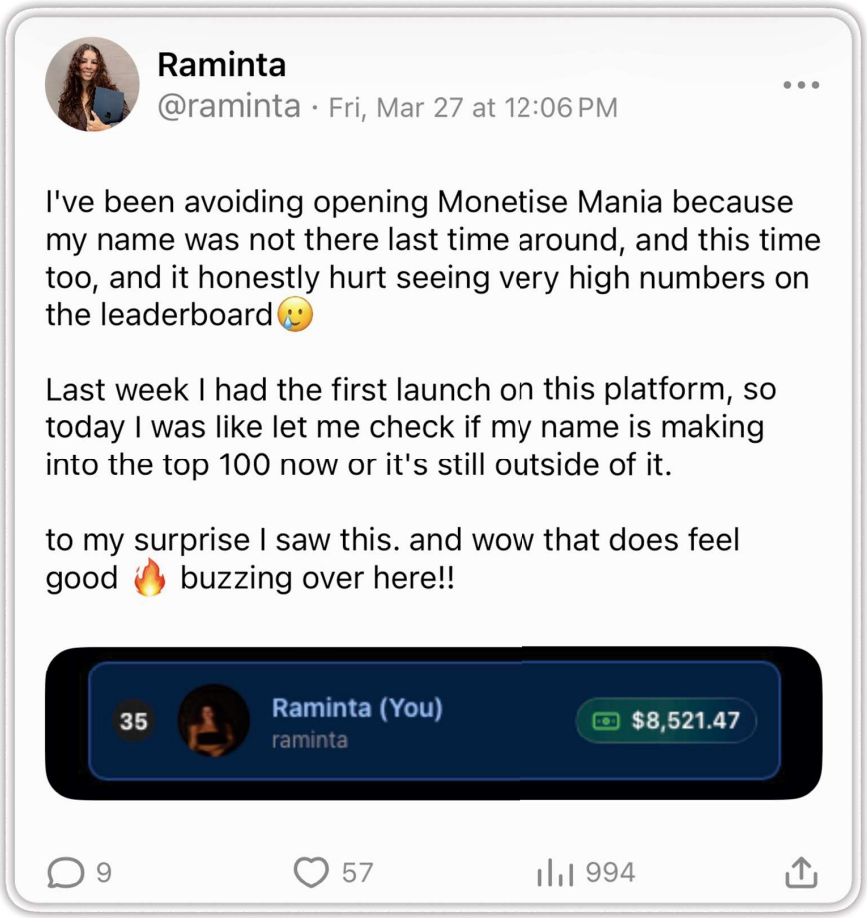

Raminta hit **$8,521 on her first launch day.** At first, she worried she wouldn't even make it onto the leaderboard. After her very first launch, she was already ranking at the top, even though it was her first time doing this.

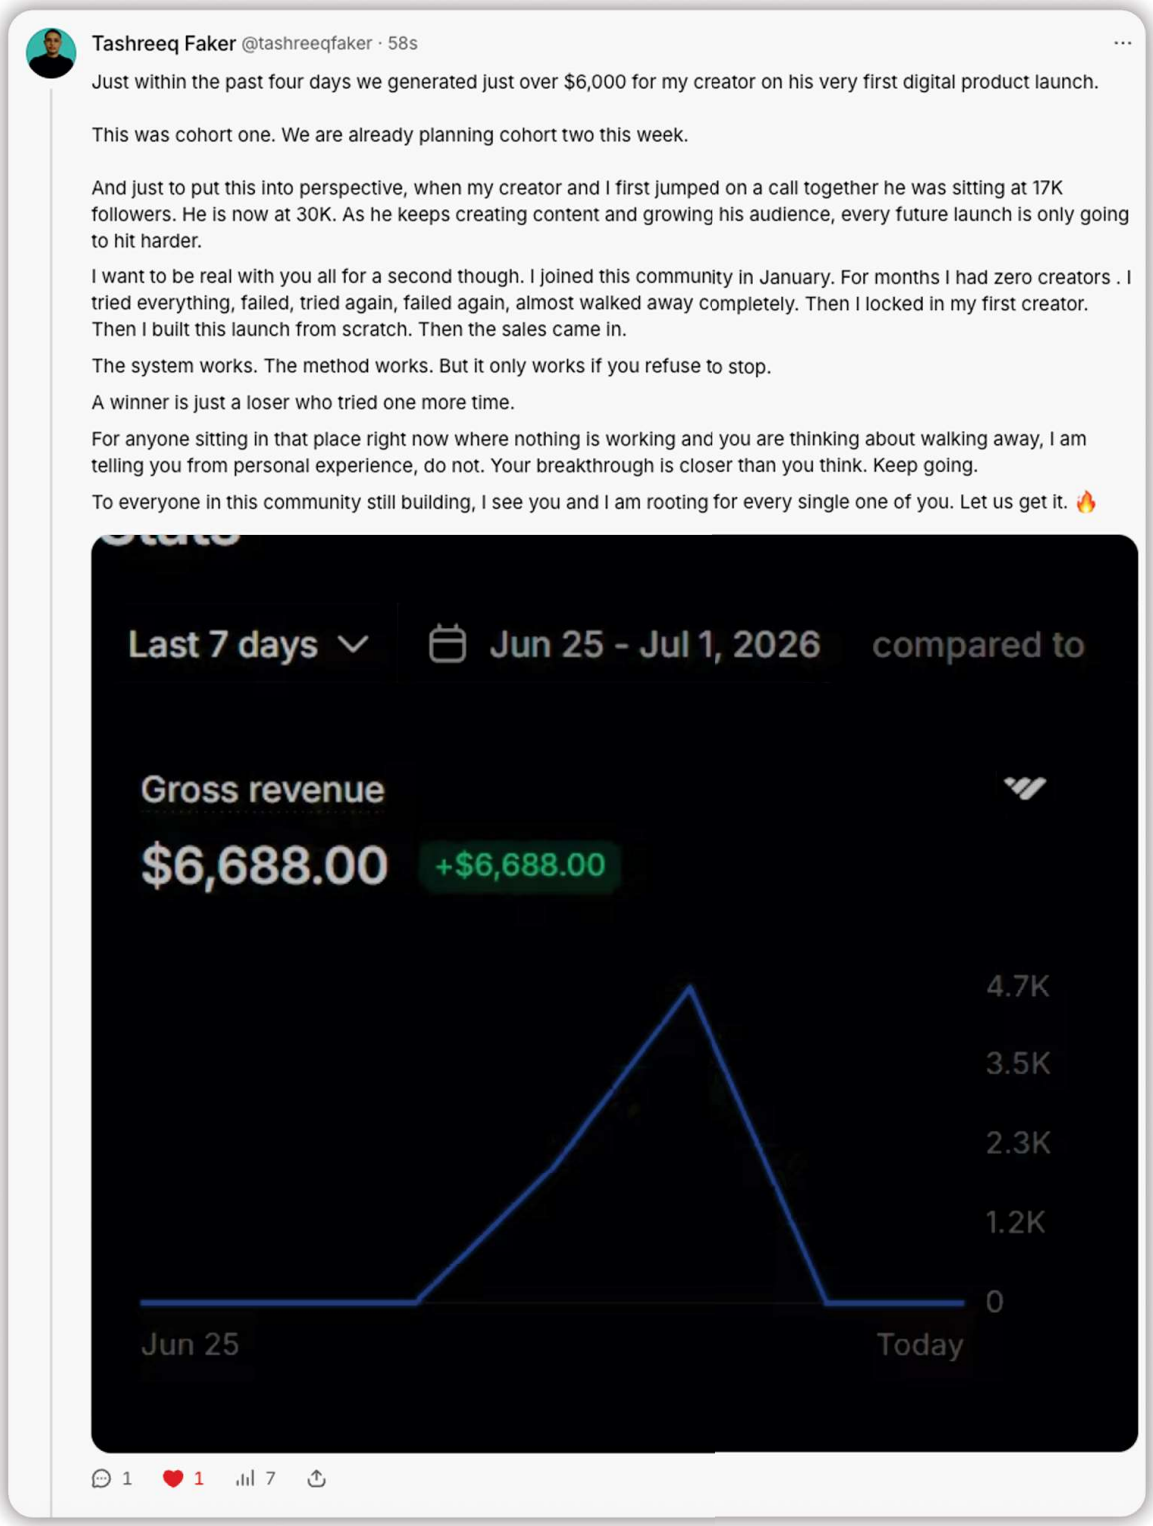

Zada's topic was a buckwheat diet for German women. She put her digital product in front of a pool of **over 70,000 potential buyers** and generated **$210,000.**

Nader generated **$2,640 in 24 hours.**

Tashreeq made **$6,600 from his first product**, which he built with Synthesise AI.

Does this apply to you?

Think honestly about the assumptions you've been carrying into this about whether this is for someone in your specific situation. Write them down:

The reason I thought this might not work for someone like me:

I thought these products were too simple for someone like me:

I would never buy a PDF in my own field (Java, NetSuite).

After everything I've heard, what I actually think about that assumption now:

Still true for experts in my fields, so I won't target them. But many buyers aren't

AI-savvy experts. The opportunity is in other markets, found with data:

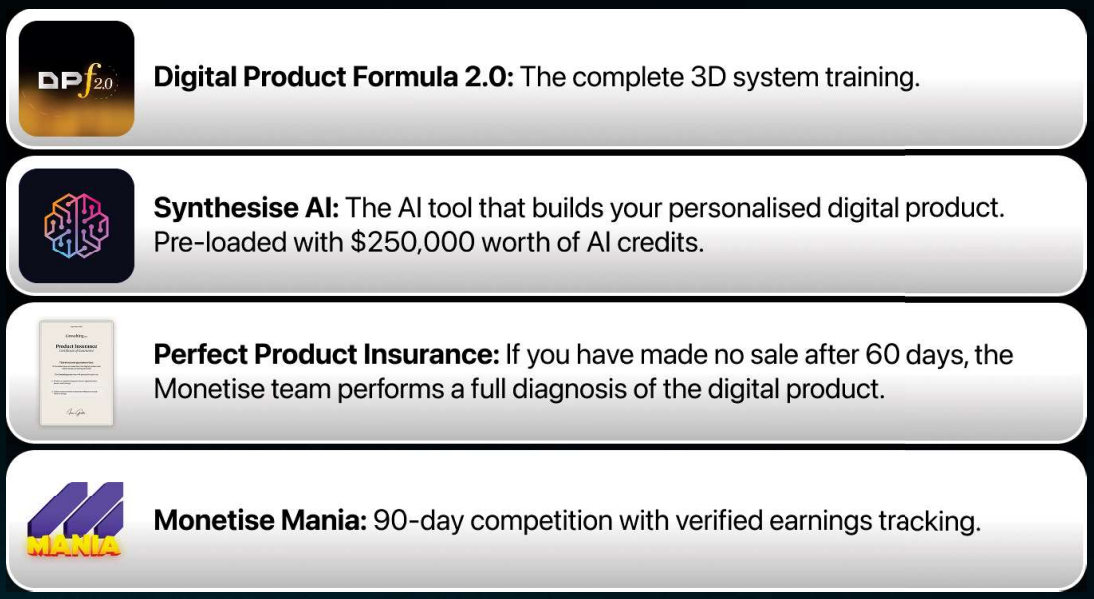

demand research + what already sells best.

FOR THOSE WHO WANT MY HELP TO IMPLEMENT THIS

We've just opened some limited spots for Monetise, the world's first **complete system** for building profitable digital products without needing any expertise, technical skills, or previous experience.

You'll get the specialised AI, the education, the support, and even the distribution. All in one place. With me as your guide in a **90-day sprint.**

You Get:

JOIN NOW AND CLAIM YOUR SPOT

SECTION 5: WHAT YOU MIGHT BE THINKING

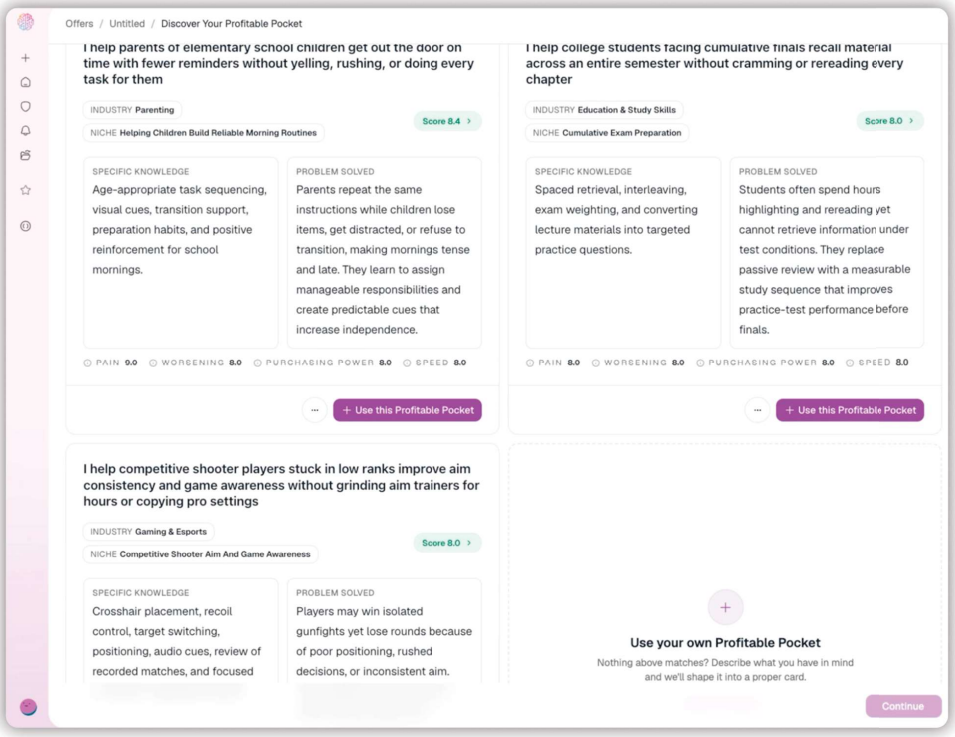

These are the thoughts that most commonly sit in the back of people's minds at this point. They are addressed here so you can work through them before making a decision.

This sounds overwhelming. I don't know if I can do this.

- This can be overwhelming, especially if you're not big into technology or maybe it's your first-ever side hustle. But here's the thing: **that's not a flaw in you.** That's just what it feels like to stand at the start of something new. 95% of the people watching feel the exact same way.
- That's why I created a situation where you don't need to trust yourself. All you need to do is **trust the software.** The software does the work for you. **The system carries the weight.**

Does the AI actually do all the work, or is this exaggerated?

- Imagine a black box machine that you could push a few buttons on, and it would pump out a profitable digital product. That's exactly what you can do now, thanks to AI. **Click one**, it picks 20 Profitable Pockets for you to choose from. **Click two**, the specialised AI synthesises 150+ real-world sources into a 45-page ebook. **Click three**, it packages everything into a ready-to-buy digital product for you.
- The AI is specifically designed to help you create products that don't require you to be the expert, so you can do this even if you have **no expertise or experience** in any particular area.

What if my first product doesn't work?

- **That's expected.** Your first product probably won't make money. Most people's first product doesn't. You keep creating new ones until you publish one that makes you money.
- Digital Product Formula includes a **complete contingency plan** and step-by-step instructions on what to do if your digital product is still not generating money. It shows you when to create a new product, how to reposition your existing one, and how to identify what the actual bottleneck is.

What does the guarantee actually mean?

- You either **10x your investment** on Monetise through your AI Digital Products, or **we keep working with you until you do.** Period. No fancy conditions. No complicated rules. No sneaky fine print.
- We'll never charge you another dollar. We keep coaching you. Keep giving you every update, every new programme. Keep supporting you until you're there.
- Everything runs through Whop, our own platform. Every sale. Every customer. Every dollar. **Verified in real time.** No honour system. We can see when you've won, and we can see when you haven't yet.
- Your investment is also protected by a **7-day, 100% money-back refund policy.** Any reason. No questions asked. You just email us, and it's processed within 48 hours. And if you refund within those 7 days, **you keep the digital product Synthesise built for you.** Your absolute worst case is a finished digital product, plus every dollar back in your pocket.

What if I have a full-time job and limited time?

- Digital Product Formula walks you through automating your entire delivery on Whop. Payments get collected, your product gets delivered, and your customers get served, **24/7, automatically, without your input.** The money comes in while you're at work, at dinner, or asleep.
- Whether you have 10 customers or 10,000, the work to deliver your product is the same: **none.** That's why people succeed with this even when they have full-time responsibilities.

THE DECISION

Here's the fact: you don't need the money itself. $1,995 is not going to make or break your life. What you need is **a side hustle that can replace your main income**, so you have the freedom to choose and do whatever you want in life.

If $5,000 was the price, and all Monetise did was take away that little knot you get every time you open your banking app. If it just meant you stopped running the maths in your head before you said yes to dinner, before you booked the trip, before the rent and the bills landed and, for once, you didn't flinch. Would that alone not be worth $5,000?

Or take the other side of it. If all it did was give you back your **time.** So you weren't trading the best hours of your day, the best years of your life, building somebody else's dream while yours sits on hold. And you never had to trade another evening or weekend just to stay above water. Wouldn't that be worth $5,000?

You can take everything you've learned over the past two sessions, file it away as "interesting information," and go back to doing what you've always done.

Or you can take action and take the first real step toward achieving your **Turning Point** in the next 90 days.

WHAT YOU GET WHEN YOU JOIN

Digital Product Formula 2.0: The complete 3D system training.

Synthesise AI: The AI tool that builds your personalised digital product. Pre-loaded with $250,000 worth of AI credits.

Perfect Product Insurance: If you have made no sale after 60 days, the Monetise team performs a full diagnosis of the digital product.

Monetise Mania: 90-day competition with verified earnings tracking.

Price: $1,995 as a single payment. Financing available through Splitit, depending on your region. As low as **$166 a month.**

JOIN NOW AND CLAIM YOUR SPOT

SECTION 6: REFLECTION

Before you make any decision, complete these sections honestly. The quality of your decision will reflect the quality of your thinking here.

Your Why:

On Day 1 you identified your Why. Return to it now. After everything you've seen in this session, does it still feel like the right one? Has it sharpened? Has something more specific emerged?

My Why, as it stands after Day 2:

A stable income that doesn't depend on my hours,

so I can work less and have more time for friends, family and travel.

Who specifically am I doing this for?

For myself, and for the people I want to spend more time with:

my friends and family.

What does their life look like when this works?

More time together, more travelling,

less stress about client deadlines.

Honest Evaluation:

Answer these questions without performing the answer you think you should give. The only person reading this is you.

What is the real reason I haven't started a side hustle before this point?

Client work kept me busy and I was selling my hours. I didn't have a system

that runs without me. AI now makes that possible.

If I do nothing after this challenge, what does my financial situation look like in 12 months?

The same as now: income tied to my hours as a developer and consultant.

What is the specific fear that is making me hesitate right now?

Building something nobody buys, or spending time on low-quality AI products that get refunds.

If I knew for certain that fear wouldn't materialise, what would I do?

Build the system now and keep launching products until one works.

SECTION 7: LIGHT BULB MOMENTS

Write down anything that landed strongly during this session, a line, an idea, an example, something that shifted how you think about this.

Biggest “Aha!” moment from Day 2:

Choose topics by market demand, not passion. The profitable-pocket test: people search for it, already pay for it, and can't find a good solution.

What changed how I see building a side hustle:

It's a numbers game: many cheap attempts, iterate until one hits.

What I’m going to do differently because of this:

Build my own AI system with two research layers (demand + bestsellers) and operator approval gates, and launch many products instead of perfecting one.

SECTION 8: NOTES

Use this space for any additional thoughts, ideas or questions for later in the week.

Their tool scores each pocket on Pain, Worsening, Purchasing power and Speed (/10).

Realistic benchmark: average Monetise client made $7,584 in total (incl. those at $0).

For Episode 3: where are the "gold mines"? How do partner/creator audiences work?

Repo: github.com/wbatorek/ai-income-project

YOUR COMMITMENT TO ACTION

Starting a side hustle could be all you need to:

- Get to decide **what you work on, where you work from, when you work**, or if you even want to work in the first place
- **No longer stress about money**
- And **reclaim the ownership of your life** and be the one dictating the shots once again

You're only one side hustle away from the life you've always dreamed of.

Commitment Statement

Whether you are joining Monetise or not, write down the decision you are making and why you are making it. Decisions written down are more likely to be acted on.

My decision after Day 2 of the AI Income Challenge:

Not joining Monetise. Building my own AI product system with Claude,

and following the remaining sessions for knowledge.

The reason I am making this decision:

I can rebuild their tools myself, and I'd rather invest in a system

I own than pay $1,995.

I commit to showing up for every remaining session of this challenge.

☒ Yes, I commit to completing this challenge ☐ No, I'm not ready yet

Date: _____

Your Next Step

The next session is all about **distribution.** I'm opening up the untapped digital goldmines. You'll see exactly where your buyers have been gathered this whole time, and you'll watch a product get put in front of them, start to finish.

For everyone who has already joined Monetise, **the unannounced bonus gets revealed.** You'll see what's been sitting in your account since the moment you checked out.

And if you haven't joined yet, this is the session you can least afford to miss. Whether you join or not, you'll know exactly where digital product buyers gather and how products get put in front of them.

What will you do to prepare?

Record the session with Wispr Flow; review our distribution notes.

When will you show up for the next session?

Date: Tue 10 Nov 2026 Time: 00:00 / 01:00 ICT

Everything you saw in this session was just Step 1. The next session opens the money side. Show up.

ANSWERS TO SECTION 1:

1. Identify	2. Profitable
3. Passion	4. Generic
5. 150	6. 45
7. Slot Machine	8. $5,000
