

AI INCOME CHALLENGE

WORKBOOK #3

A LETTER FROM IMAN

Most people who build a side hustle never make money from it.

Not because the idea is bad. But because they have no one to sell it to.

They build something worth buying, then spend months guessing how to find buyers. Posting. Hoping. Waiting. And the product sits there. Ready. Earning nothing.

What Changed

For years, the only way to sell a digital product was to build your own audience first. Grow a following. Create content for months or years. Hope that eventually enough people would pay attention to justify putting an offer out.

Creators changed that.

There are **303 million creators** in the world right now. **41 million micro creators** on Instagram alone. Almost all of them have the same problem: loyal audiences, years of trust, and no product to offer.

Less than 1% of creators have a digital product. Every single one of them has a "business inquiries" email in their bio. That's them raising their hand, telling the world they need someone to bring them an opportunity.

You don't need to build an audience. You borrow one that's already been built.

This Is Episode 3

In Episode 1, you saw the opportunity. AI Digital Products. **An AI income built on assets** that earn whether you're working or not.

In Episode 2, you watched me build a complete AI Digital Product from scratch, in three clicks, right in front of you. **Identify. Synthesise. Package.**

This episode gave you the other side: **how to get that product in front of people who will actually buy it.** You saw the 3 Switches: Partner, Personalise, Publish. You saw how every part of the process, from finding creators to delivering the product and collecting payments, is handled for you.

What's In This For Me

I'm a co-owner of Whop. Whop takes a small percentage of every transaction.

Every time you earn through this system, I earn too.

I'm telling you this because it means I have every reason to make sure this actually works for you.

Your Next Step

Work through this workbook. Lock in the 3 Switches. Pick your first creator.

You have the product. You have the audience. The only step left is yours.

INTRODUCTION

This is Episode 3 of the AI Income Challenge.

By the end of this workbook, you'll understand:

- Why building your own audience is not required to earn with an AI Digital Product
- How the borrowing audiences model works and why creators are eager to say yes
- What the 3 Switches are and how they form a rinse-and-repeat income system

Inside These Pages, You'll:

- Complete the key takeaway fill-in-the-blanks from Episode 3
- Map the 3 Switches to the 3D System
- Identify what is done for you and what your role actually is
- See real results from real people who have already run this system

WATCH EPISODE 3 HERE

This is the path from product to income. Let's begin.

SECTION 1: KEY TAKEAWAYS

Fill in the blanks using what you remember from the training. Rewatch if needed.

This locks in the core learning.

(Answers can be found at the end of the workbook.)

1. Most people who start a side hustle practise “hope marketing ” and experience feast-or-famine income.
2. In the supermarket analogy, brands never have to find buyers because buyers already come to the supermarket.
3. The football jersey analogy shows that a branded jersey sells for more and sells more units than a blank one.
4. Creators are the football clubs of the digital world because they have loyal audiences and no product to offer them.
5. A micro creator has between 10,000 and 100,000 followers.
6. According to Linktree, 46 % of full-time creators earn less than $1,000 a year.
7. The 3 Switches are: Partner, Personalise, and Publish.
8. Filter 1 states that a creator’s video should be doing 50,000 to 200,000 views.
9. Filter 4 states that a creator’s Reels should average at least 10 % of their follower count in views.
10. Whop handles payments, delivers the product automatically, and sends revenue splits to your bank account.

SECTION 2: HOPE MARKETING AND THE SUPERMARKET SHELF

The Distribution Problem

You have built the product. Now what?

This is where most people get stuck. They post about it. They share it with their friends. They might run a few ads. And then they wait. They hope something lands.

That is not a system. That is **Hope Marketing**.

Hope Marketing is when you have no reliable way to get your product in front of the right people, so you just throw things at the wall and see what sticks. It is exhausting, inconsistent, and it rarely works.

The Supermarket Shelf

Think about how a supermarket works. The shelf does not hope someone walks past. The shelf is in the right aisle, stocked with the right product, and positioned in front of the people who are already looking for it. It is **systematic**. It is repeatable. And it runs without the supermarket owner standing there shouting at every customer.

That is what I am building for you. Not a one-off post. Not a launch you have to repeat from scratch. A shelf. A system where your product is placed in front of the right audience, through the right person, over and over again.

One distribution channel, running on autopilot. That is the goal.

Section 2 Fill-In-The-Blanks

Hope Marketing

What is the name for posting randomly and hoping something lands?

Hope Marketing

The Supermarket Shelf

What does the supermarket shelf represent in this model?

A systematic system for distributing your product

What is the goal of the distribution system?

One distribution channel, running on autopilot

SECTION 3: THE FOOTBALL JERSEY AND CREATORS

The Jersey Analogy

I used football jerseys to explain the difference between a generic product and one that's personalised for a creator.

Two jerseys. Same fabric, same stitching, same size. They could have come off the same machine, in the same factory, on the same day. Identical in every way except one.

The first one is plain white. The second one is branded as a football club's jersey, with the club's colours, badge, and design.

In the 2022/23 season, **Liverpool sold more than 1.8 million jerseys -** more than any club in the world that year. Over **$130 million** worth, from one club, in a single season.

The AI Digital Product built in Episode 2 is the blank white jersey. It works. People buy it. But the branded version, personalised for a creator, has drastically higher earning potential.

Creators Are the Football Clubs

In the digital world, creators are the football clubs. Millions of them with packed audiences of loyal followers who show up every single day, and empty shelves. No product to offer. Most people think their biggest problem will be finding buyers. In almost every industry, that's true. **This one is different.**

The creator economy is the only industry where the problem is the opposite: there's a shortage of products for the buyers to buy.

Macro vs Micro

When most people hear "partner with a creator," they picture the famous ones. Millions of followers. But reaching out to a creator with millions of followers gets you nothing. Their message gets buried under hundreds of others. And even if it gets opened, it's not the creator reading it - people at that level have managers and agencies whose entire job is filtering out everyone who isn't already famous or already rich. The deals at that level go to **brands with unlimited marketing budgets**, competing with each other to pay hundreds of thousands of dollars for a single post.

So they're all competing for the **0.01% of creators**.

But while everyone fights over the same few hundred famous names at the top, millions of smaller creators sit right underneath them - and nobody is paying attention.

I call them **micro creators**. Somewhere between **10,000 and 100,000 followers**. At this size, the creator is still a relatable person connected to their audience. They answer their own comments. They reply to their own DMs. Their audience feels like they actually know them.

When a micro creator offers their audience something that helps with the exact topic they've been following them for, people line up to buy before the offer even drops. Because as far as they're concerned, that recommendation is coming from someone they know, like, and deeply trust.

Liverpool's Numbers

How many jerseys did Liverpool sell in the 2022/23 season?

More than 1.8 million

The Supply Gap

In the creator economy, what's the real shortage?

A shortage of products for the buyers to buy

Macro vs Micro

When you go after famous macro creators, who do the deals actually go to?

Brands with unlimited marketing budgets

What Makes Micro Creators Valuable

What have micro creators kept that big accounts lost a long time ago?

They're still relatable people connected to their audience

SECTION 4: THE UNFAIR ADVANTAGE

Borrowing Audiences

You do not have an audience like mine, and you will never need one. Instead, you **borrow** the audiences that creators have already built.

Why would a creator agree? Think about a small creator you follow. Someone whose content you have been watching for months, maybe years. How much money have you actually paid them? For almost everyone, the answer is zero. There was never anything to buy.

That is the situation almost every micro creator is stuck in. Years of building trust, posting every day, showing up for their audience, and they earn almost nothing from it.

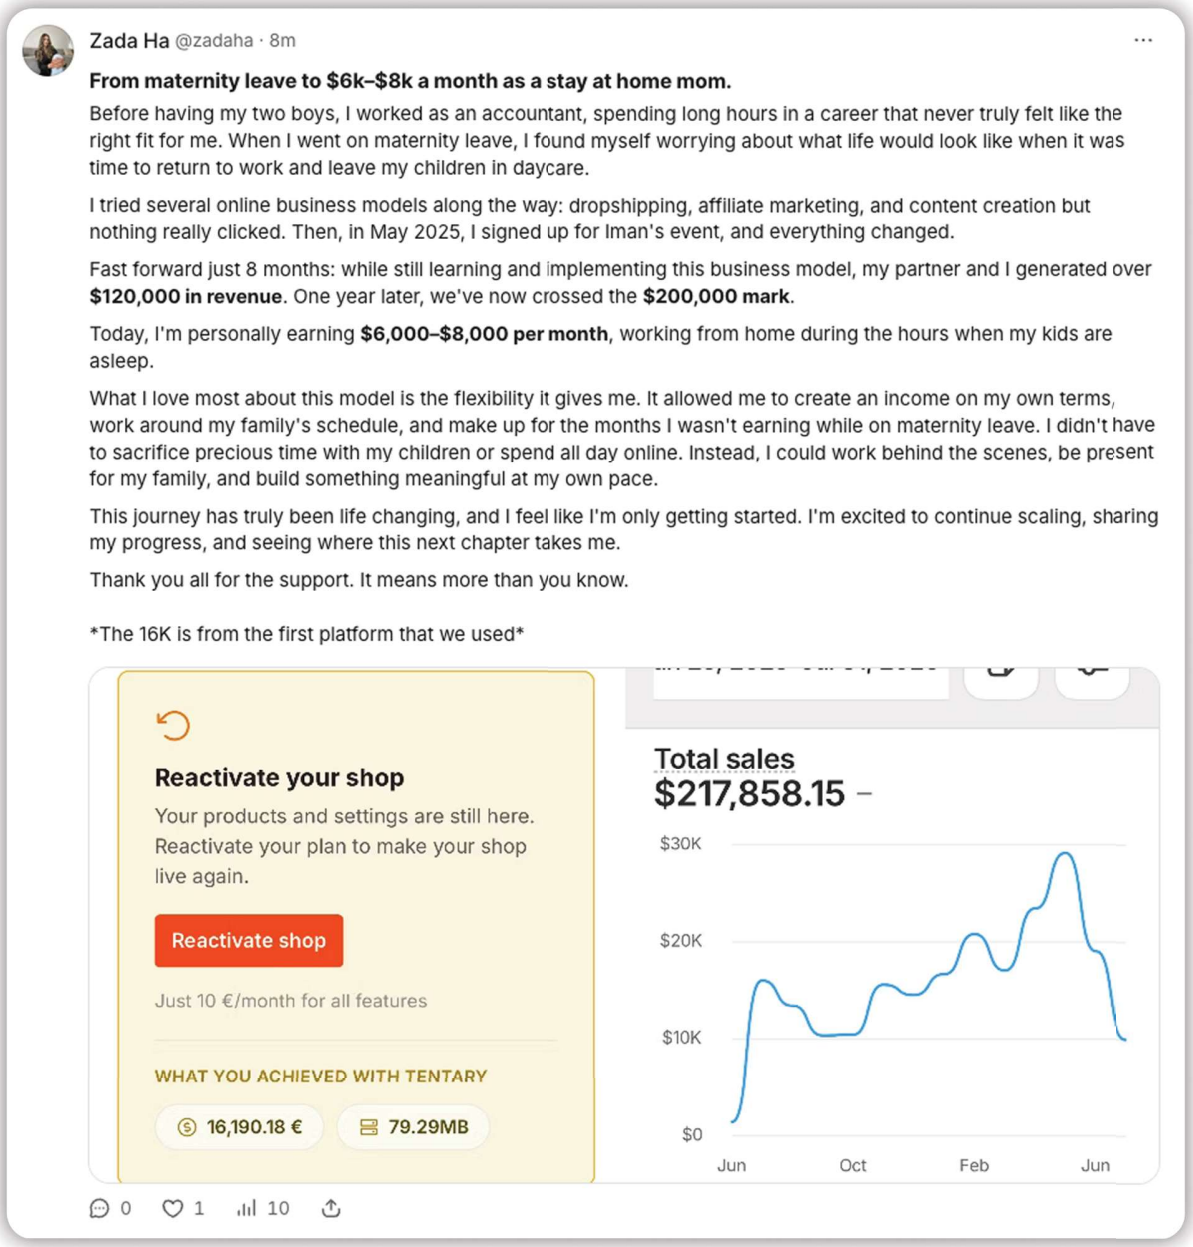

The Creator Income Gap

Linktree ran the biggest survey ever done on creators and found that **46% of full-time creators earn less than $1,000 a year**. Creating content at that level is a lot of work, and they are taking home less than $1,000 a year from it. Among part-time creators, which is what most micro creators are, that number climbs to **68%**.

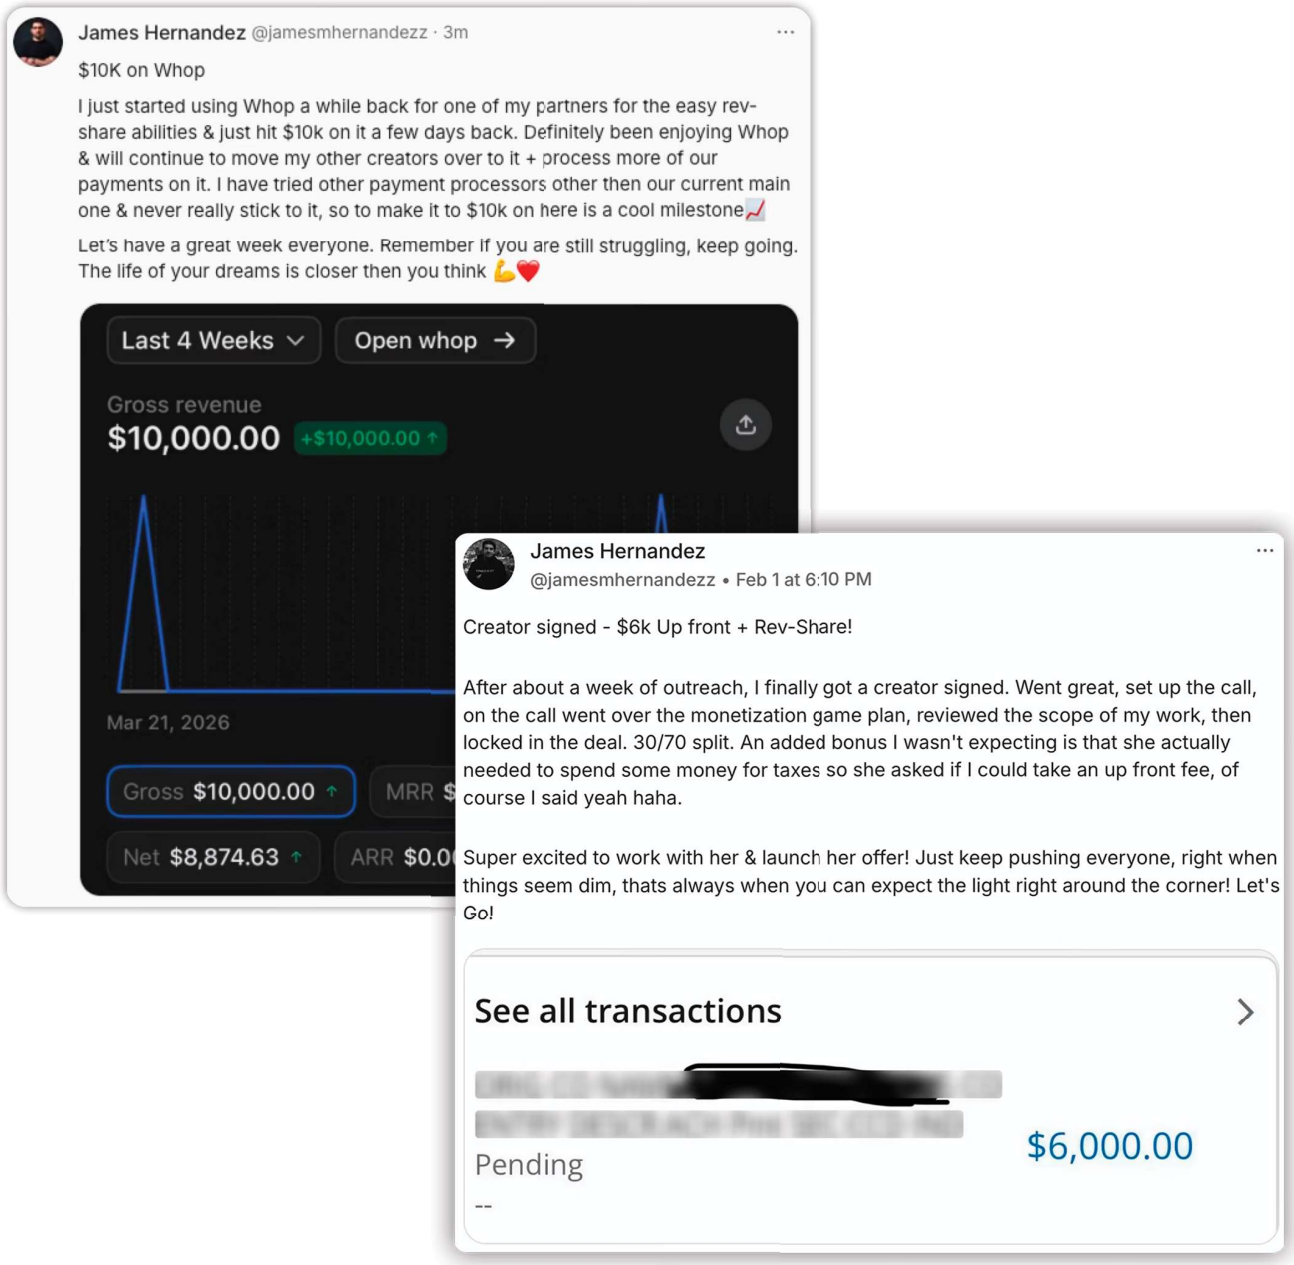

There are over **303 million creators** in the world. Nearly the population of the United States. Almost all of them have the same problem. Most of them do not even know the opportunity exists. When they think about earning from their content, they think about sponsorships, brand deals, and affiliate links. Every single one of them has a “business inquiries” email in their bio. **That is them raising their hand, telling the world: I need someone to offer me an opportunity.**

The Wins

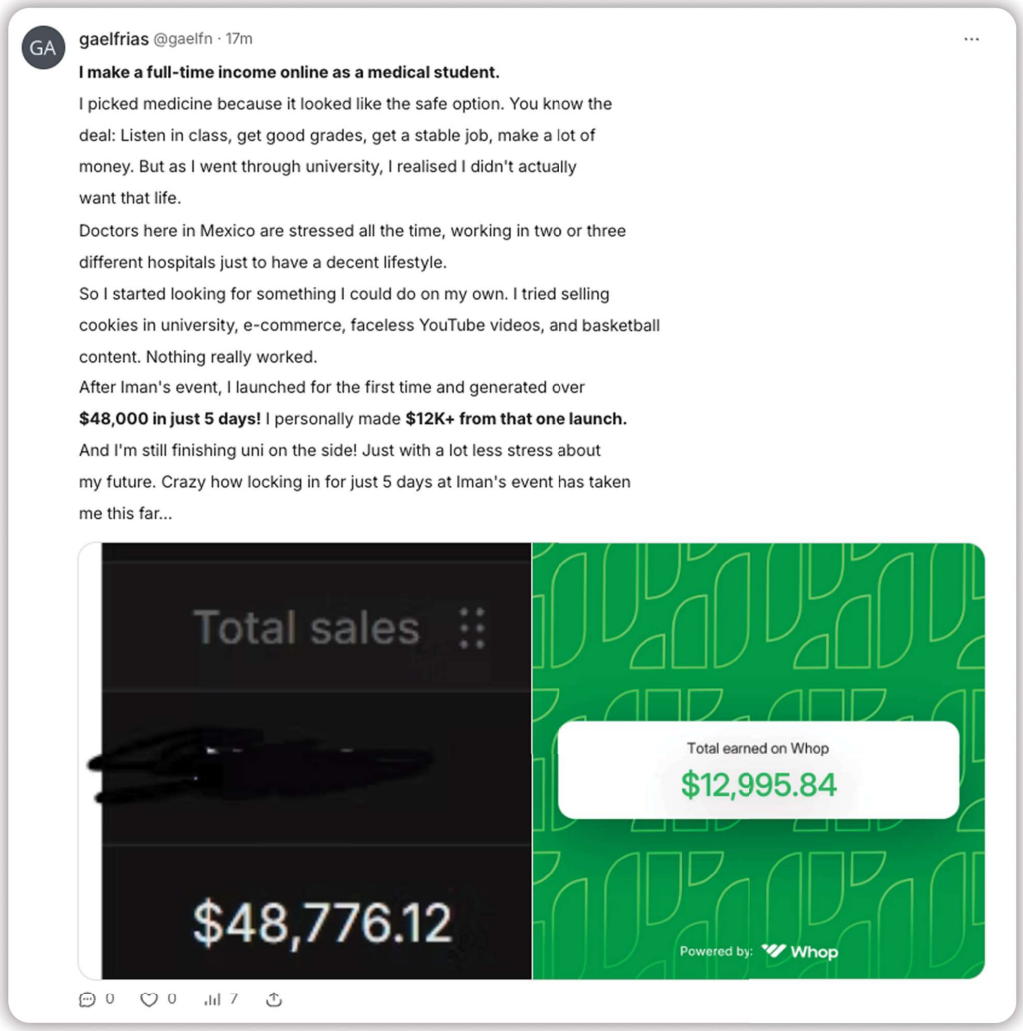

Zada was a mum of two, working in accounting, coming off maternity leave. She built one $14 ebook and used a creator's audience of over 70,000 people. **Her first month: $11,000.** Every month since, she has brought in between **$6,000 and $8,000** consistently, without doing extra work on top of what she did to build the product.

James was working ten-hour days at a car wash in Nashville. Within a week of starting, he had made **$6,000** from partnering with a creator. Last month, that number had grown to **$19,000 in a single month**.

Gael, a med student in Mexico, partnered with one paediatrician creator with 300,000 followers on TikTok. That single launch did **$48,000 in five days**. His share: **$12,995.84**. He now brings in around **$10,000 a month** across 4 separate creator partnerships.

Every one of them borrowed an audience somebody else had already built. Every dollar is tracked and verified through Whop.

That is why the better the creator you find, the worse you can be at everything else. When the audience already trusts the person doing the recommending, you can get everything else wrong and people will still buy. That is why this is the most forgiving income model there is.

Section 4 Fill-In-The-Blanks

The Creator Income Gap

What percentage of full-time creators earn less than $1,000 a year?

46 %

What percentage of part-time creators earn less than $1,000 a year?

68 %

How Many Creators

How many creators are there in the world?

Over 303 million

Borrowing Audiences

What did every single success story shown in this episode have in common?

They all borrowed an audience somebody else had already built

The Wins

What did Zada earn in her first month?

$11,000

What did James make within his first week of partnering with a creator?

$6,000

What was Gael's personal share from his first five-day launch?

$12,995.84

SECTION 5: THE DONE-FOR-YOU LIST

The 3 Switches

The rinse-and-repeat system for distributing and delivering an AI Digital Product comes down to three Switches.

Switch 1: Partner. You partner with a creator to access their untapped digital goldmine. This is Step 2 of the 3D System: **Distribute.**

Switch 2: Personalise. You personalise the AI Digital Product for the creator. This is still part of the Distribution step.

Switch 3: Publish. You publish the AI Digital Product on a platform that handles delivery for you. This is Step 3 of the 3D System: **Deliver.**

Why This Removes the Risk

Every part that should be hard about this has already been done for you.

You do not need to know a single creator. The way the system is built, the right creators end up raising their hand and coming to you, rather than you going to them.

You do not need to become an expert on the creator, their content, or their audience. Creating a personalised AI Digital Product for a creator is even easier than the three clicks you saw in Episode 2.

And you do not need a website, a store, or any tech skills to set up the infrastructure. By the time you have flipped the last Switch, all of that is set up for you in one click.

Once these switches are flipped, it is only a matter of time before your phone starts buzzing with payment notifications. Over and over again.

What is Done For You:

- Reaching out to creators - done for you.
- Building the product - done for you.
- Getting paid - done for you.

Section 5 Fill-In-The-Blanks

Mapping to the 3D System

Which step of the 3D System does Switch 1 (Partner) belong to?

Step 2: Distribute

Which step of the 3D System does Switch 3 (Publish) belong to?

Step 3: Deliver

The Risk Removal

How do the right creators end up finding you, rather than you chasing them?

They end up raising their hand and coming to you

The Setup

What is set up for you in one click by the time you flip the last Switch?

The website, the store, and all the technology

FOR THOSE WHO WANT MY HELP TO PUT THIS INTO ACTION

You have now seen the full picture of how this works. The product. The system. The creators. The results. The question is: what happens next for you?

If you want to go further on your own, everything you need is in these episodes.

But if you want my team and me to work alongside you, to help you find the right creator, build the right product, and get it in front of an audience that is ready to buy, then I have put together everything you need to make that happen fast.

Here is what you get when you join:

- **Digital Product Formula 2.0:** The complete 3D system training.
- **Synthesise AI:** The AI tool that builds your personalised digital product. Pre-loaded with $250,000 worth of AI credits.
- **Perfect Product Insurance:** If you have made no sale after 60 days, the Monetise team performs a full diagnosis of the digital product.
- **Monetise Mania:** 90-day competition with verified earnings tracking.
- **ListKit with 100 Pre-Loaded Leads:** The automated email outreach tool.
- **Hidden Feature in Synthesise:** Takes a creator's Instagram link and hands you back a fully personalised AI Digital Product a few minutes later.

JOIN NOW AND CLAIM YOUR SPOT

SECTION 6: SWITCH 1 - PARTNER

Where to Find Creators

The first thing you do is open Instagram and go to the **Explore page**.

You search by typing in an industry plus a keyword that creators in that industry use in their content. For example: “parenting tips.” Then you scroll through the results.

Every creator you find has to pass all **5 Filters** before you even think about reaching out to them. If they fail even one, you skip them and move on.

Filter 1 - The views on their video

Scroll past the ones at the very top with millions of views. You are looking for creators doing somewhere between **50,000 and 200,000 views**. That is the sweet spot. It shows the creator can make content people actually want to watch, and it gets you past the big accounts so you can find the micro creators underneath.

Filter 2 - Their followers

Once you find a creator in that view range, click through to their profile and check their follower count. You want them in the sweet spot: **10,000 to 100,000 followers**. Over 100,000 and you are back to competing with brands that have huge marketing budgets. Under 10,000 and the audience is usually too small to make the numbers work.

Filter 3 - They’re not already selling a product of their own

Look at the link in their bio and scroll through their content. If you see a link to their own course, ebook or coaching programme, or they are promoting a product of their own in their posts, skip them. You want the creators who are NOT making money from their audience yet. They have already done the hard work of building an audience that trusts them. They just need someone to help turn that audience into income.

Filter 4 - Their engagement

Engagement tells you whether their audience is actually paying attention. One video can go viral by luck. What matters is how their Reels perform on average. Take their follower count and divide it by 10. Their Reels should be getting at least that many views on average. Go to the Reels tab and look at the views on their last 10 Reels. If most of them clear that number, they pass. If not, move on.

Filter 5 - A business email in their bio

This tells you they are open to partnerships. They are expecting people to reach out to them with business deals. If they have a business email in their bio, they pass the fifth filter.

If a creator passes all 5, they are worth reaching out to.

How Creators Come to You

Most people mess this up by sending generic messages like “Hey, want to work together?” and wondering why nobody responds.

Which is why here, we do not do any of that manual work. Instead, we let specialised AI take care of it.

How ListKit Works

The AI inside ListKit sends **tens of thousands of emails a day -** and has been optimised based on the analytics of **millions of emails** it has sent. It studies every single one - whether it got opened, whether the response was negative or positive. It never stops analysing. So by the time you flip the switch, it has already been optimised toward the highest possible positive response rate.

ListKit follows up automatically, politely, as many times as needed. It does all of this every single day, on autopilot. When a creator raises their hand and says “I want this,” all you have to do is choose if you want them.

Your only job is to flip the Switch, click a few buttons, and wait for positive replies to come flooding in.

It only takes **one yes** to completely change your situation.

FILL-IN-THE-BLANKS

Where to Find Creators

You open Instagram and go to the Explore page. You type in an industry plus a keyword that creators in that industry use in their content.

Filter 1 - The views on their video

You look for creators doing between 50,000 and 200,000 views.

Filter 2 - Their followers

You want creators with between 10,000 and 100,000 followers.

Filter 3 - They're not already selling a product of their own

You want creators who are NOT already making money from their audience.

Filter 4 - Their engagement

To check engagement, take the creator's follower count and divide it by 10. Their Reels should be getting at least that many views on average.

Filter 5 - A business email in their bio

A business email tells you the creator is open to partnerships.

How ListKit Works

The AI inside ListKit sends tens of thousands of emails a day, and has been optimised based on the analytics of millions of emails it has sent. When a creator raises their hand, all you have to do is choose if you want them. It only takes one yes to completely change your situation.

SECTION 7: SWITCH 2 - PERSONALISE

What This Switch Does

This is where you help the creator develop their personalised product. In football terms, this is where you create the **branded club jersey** instead of the blank white jersey.

Yesterday, you saw how to create a digital product on any topic - not tailored to any specific creator's audience. Today, Switch 2 shows you how to take that same skill and use it to develop a product personalised to a specific creator.

You Are Not the Expert

Your job is not to become an expert on the creator's topic overnight. The creator is the expert. They have the knowledge and the credibility. What you do is use specialised AI to structure their knowledge into a personalised product that their audience will buy.

The Hidden Feature Inside Synthesise AI

That same specialised AI you used in Episode 2 has a hidden feature inside it. This hidden feature allows you to create an AI Digital Product based on the content of a specific creator.

The only thing that changes is what you give Synthesise to start with. Instead of scanning the entire internet to identify profitable pockets, it scans the content of the specific creator you pick.

This way, it creates an AI Digital Product tailored specifically to that creator's audience - in the creator's tone, voice, and branding. So the moment their audience sees it, they recognise it as theirs. The same way a Liverpool fan would unmistakably recognise their club's jersey from across the street.

FILL-IN-THE-BLANKS

What This Switch Does

Switch 2 is where you help the creator develop their personalised product. In football terms, this is where you create the branded club jersey instead of the blank white jersey.

You Are Not the Expert

Your job is not to become an expert on the creator's topic. The creator is the expert. You use specialised AI to structure their knowledge into a personalised product their audience will buy.

The Hidden Feature

The same specialised AI from Episode 2 has a hidden feature inside it. Instead of scanning the entire internet, it scans the content of the specific creator you pick. The result is a product in the creator's tone, voice, and branding.

SECTION 8: SWITCH 3 - PUBLISH

Whop: The Delivery Infrastructure

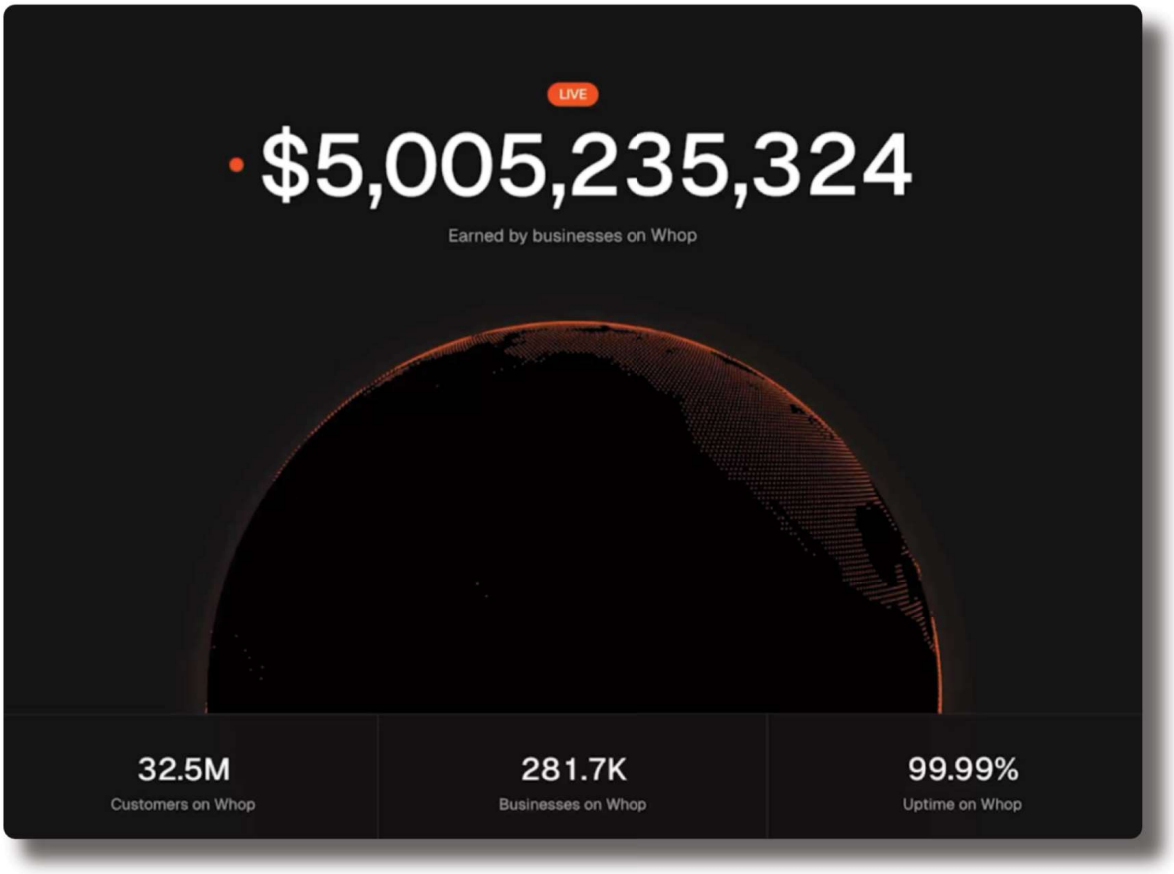

I'm a co-owner of Whop, and users have earned over **$5 billion in payouts** from their products on the platform. It is built specifically for digital products: ebooks, PDFs, courses, memberships, coaching programmes. Everything runs through Whop.

It handles three things:

1. It processes the payments
2. It delivers the digital product automatically
3. It sends your cut of the revenue directly to your bank account, and the creator's cut to theirs - so you never have to pay any creator out of pocket or worry about how everyone gets paid

Everything is completely automated. Set it up once and earn from that creator's digital product without having to touch it again.

With this setup, you don't need multiple tools or complicated tech. Everything lives in one place with a simple interface.

FILL-IN-THE-BLANKS

Whop's Payouts

Whop users have earned over $5 billion in total payouts.

The 3 Things Whop Handles

1. It processes the payments
2. It delivers the digital product automatically
3. It sends revenue splits to your bank account

The Scaling Question

With a listed digital product, what is the difference between delivering 10 units and 10,000 units?

Exactly the same effort from you

SECTION 9: LIGHT BULB MOMENTS

Use this space to capture any ideas, realisations, or connections that hit you during Episode 3.

1. **What was the moment something clicked?**

Distribution runs through other people's audiences: micro-creators with trust but no product.
The creator is the customer we must win; their trust sells the product to the end buyer.

2. **What is one thing you are going to do differently after watching this episode?**

Design our system with three channels (partner creators, own faceless channel, marketplaces) and compare cost per sale, instead of relying on one channel.

3. **What question do you still have that you want answered?**

What happens after a creator says yes: contracts, launch format, how splits are set up?
Real conversion rates for cheap ebooks ($14-45), not for course launches?
How saturated is the creator pool after thousands of course buyers email the same people?

SECTION 10: NOTES

Session said 4 filters; workbook lists 5 (adds Reels engagement: avg views >= followers / 10).

James: 30/70 split + $6,000 upfront. Gael: 300k-follower creator (outside the 10k-100k band).

ListKit = cold email at scale: check legality (CAN-SPAM, GDPR) before copying the method.

Whop fees still never stated: compare platforms in phase 2.

Repo: github.com/wbatorek/ai-income-project

THE COMMITMENT

Your Commitment to Start

You've seen how creator partnerships work. You've seen how specialised AI sends email outreach on your behalf so the right creators raise their hand and come to you. You've seen how Synthesise personalises a product for that creator in minutes. You've seen how Whop handles delivery and payments automatically. You understand why a single "yes" from one micro creator can change your financial situation.

The only thing standing between you and your first creator partnership is the decision to start.

I commit to taking my first step within the next 24 hours.

Why this matters to me:

A stable income that doesn't depend on my hours, so I can work less and have more time for friends, family and travel. First step: finish phase 1 (research and requirements) for our own AI system, then choose tools and build it.

Signed: _____

Date: _____

THE DECISION

This is the moment most people sit on. They say they need more time. More information. They want to think about it.

But you have had three episodes. You have seen the product. You have seen the system. You have seen the results.

The only thing left is a decision.

FOR THOSE WHO WANT MY HELP TO PUT THIS INTO ACTION

- **Digital Product Formula 2.0:** The complete 3D system training.
- **Synthesise AI:** The AI tool that builds your personalised digital product. Pre-loaded with $250,000 worth of AI credits.
- **Perfect Product Insurance:** If you have made no sale after 60 days, the Monetise team performs a full diagnosis of the digital product.
- **Monetise Mania:** 90-day competition with verified earnings tracking.
- **ListKit with 100 Pre-Loaded Leads:** The automated email outreach tool.
- **Hidden Feature in Synthesise:** Takes a creator's Instagram link and hands you back a fully personalised AI Digital Product a few minutes later.
